

## Report to the House of Assembly

On the Audit of the Financial Statements of the Province of Newfoundland and Labrador

For the Year Ended March 31, 2013

## Office of the Auditor General Newfoundland and Labrador

The Auditor General reports to the House of Assembly on significant matters which result from the examinations of Government, its departments and agencies of the Crown. The Auditor General is also the independent auditor of the Province's financial statements and the financial statements of many agencies of the Crown and, as such, expresses an opinion as to the fair presentation of their financial statements.

## **VISION**

The Office of the Auditor General is a highly valued legislative audit office recognized for assisting Members of the House of Assembly in holding Government accountable for the prudent use and management of public resources.

## **Head Office Location**

15 Dundee Avenue Suite 201 Mount Pearl Newfoundland and Labrador Canada

## **Mailing Address**

P.O. Box 8700 St. John's Newfoundland and Labrador Canada A1B 4J6

1 Union Street Corner Brook Newfoundland and Labrador Canada

January 2014

The Honourable Ross Wiseman, M.H.A. Speaker House of Assembly

Dear Sir:

In compliance with the *Auditor General Act*, I have the honour to submit, for transmission to the House of Assembly, my Report on the Audit of the Consolidated Summary Financial Statements of the Province for the year ended March 31, 2013.

Respectfully submitted,

TERRY PADDON, CA

**Auditor General**

## CHAPTER 1 COMMENTS OF THE AUDITOR GENERAL

## **Auditor General's Report**

This Report, commenting on the financial statements of the Province of Newfoundland and Labrador, is my second as Auditor General of Newfoundland and The Consolidated Labrador. Summary Financial Statements reflect the financial position and annual operating results of all organizations in the Government Reporting Entity (GRE). The statements provide the most complete information about the operating results and financial position of the Province. This Report provides additional information and commentary resulting from the audit, by this Office, of the Consolidated Summary Financial Statements of the Province for the year ended March 31, 2013.

As Auditor General, I am responsible for this Report to the House of Assembly.

## **Accountability**

The Public Accounts are one of the most important documents which enable the House of Assembly, and all Newfoundlanders and Labradorians, to hold Government accountable for its stewardship of public funds.

The Consolidated Summary Financial Statements (Public Accounts) provide the most complete information about the financial position and operating results of the Province. They combine the financial position and operating results of central Government and departments, with those of other Government entities.

## **Financial Results**

### **Financial Results**

The Province recorded a deficit of \$195 million for the year ended March 31, 2013, a variance of \$63 million from the expected deficit of \$258 million which was forecast at the time of Budget 2012.

## Offshore Revenue

In 2012-13, oil royalties were \$1.8 billion, or 24.4% of total revenues. While still significant, oil royalties declined by 34.6% from the 2011-12 level of \$2.8 billion, providing a stark indication of the volatility of this revenue source.

The impact of oil production on the overall revenues of the Province is even greater considering that a significant portion of corporate income tax, personal income tax, and other direct, indirect or induced revenues result from activity in the offshore sector as well.

While of significant importance to the economy and treasury of Newfoundland and Labrador, it is important to recognize that activity and revenue from the non-renewable resource sector is time limited and will diminish if not replaced.

## Expenses

Since 2004, the Province's expenses have grown from \$5.1 billion to \$7.7 billion in 2013, an increase of \$2.6 billion, or 51.0%. Per capita expenses in Newfoundland and Labrador are the highest in Canada. In fact, per capita expenses are approximately 40% higher than the average of all other provinces.

## Tangible Capital Assets

From 2004 to 2013, the Province has spent a total of \$3.6 billion related to tangible capital assets. Acquisitions of tangible capital assets from 2011 to 2013 averaged approximately \$675 million - almost 3 times greater than the average annual acquisition of tangible capital assets from 2004 to 2010 - which was \$230 million. As the Province attempts to balance its budget, continued spending on tangible capital assets at current levels are not likely sustainable.

### Net Debt

The Net Debt of the Province at March 31, 2013 was \$8.3 billion. Net Debt has declined by approximately \$3.1 billion since 2003-04 and by \$3.5 billion from its peak in 2004-05. Despite significant surpluses in 2010-11 and 2011-12, Net Debt has remained relatively constant over the past four years. The beneficial impact of surpluses on Net Debt has been primarily offset by acquisitions of tangible capital assets during these periods.

While the overall level of Net Debt has declined over the past seven years, the component parts show mixed results. The liability for employee future benefits has seen significant variability over the period from 2003-04 to 2012-13. Employee future benefits include obligations related to pension arrangements and group health and life insurance benefits which are generally cost shared with provincial retirees. The liability related to employee future benefits totaled \$5.6 billion at March 31, 2013, a \$400 million increase from the previous year and represents 67% of the Province's Net Debt.

## Employee Future Benefits

The unfunded liability related to employee future benefits declined significantly in 2005-06, the year the \$2 billion advance payment under the Atlantic Accord 2005 was directed to the Teachers' Pension Plan. In addition, further special payments totaling approximately \$1.6 billion were made between 2006 and 2013 to address the unfunded pension liability. Since 2007-08, the unfunded liability has increased, such that, at March 31, 2013, the total unfunded liability is now greater than it was at March 31, 2005, despite in excess of \$3.6 billion in special payments over that period. This reflects the inherent volatility related to this unfunded liability and the risks borne by the taxpayers of the Province for the retirement benefits of public employees.

## **Looking Forward**

The 2013 provincial budget presented a three year outlook which forecast two years of deficits followed by a return to surplus by 2015-16. In its 2013-14 mid-year financial update, Government indicated that the projected budget deficit for 2013-14 is now expected to be \$451 million instead of the projected deficit of \$564 million at the release of Budget 2013. The decrease in the projected deficit for 2013-14 results primarily from lower expenses.

As Government attempts to deal with deficits over the medium term, it will have to consider a number of alternative options - increasing revenue, decreasing expenses, borrowing or a combination of all. A major consideration in determining the response to potential deficits will be whether they are viewed as being temporary or more sustained. The answer will, to a large extent, depend on expectations of commodity prices and production levels.

Demographic change is one of the most significant indicators, or predictors, of the future demands on public services. Demographic issues have impacted the revenues and expenses of the Province in previous years and will continue to do so in the future. These demographic issues include shifts in the population between various regions within the Province, migration to other jurisdictions and an aging population. Such issues will impact delivery of public services and the types of services required as well as their associated costs. The impact of demographic change will also have a significant impact on labour markets.

## **Muskrat Falls**

On December 17, 2012, Government announced the sanction of the Muskrat Falls project (the Project). The Project consists of a Muskrat Falls 824 megawatt hydroelectric plant, a transmission line connecting the Muskrat Falls plant to the Churchill Falls plant and a transmission line to move the power from the Muskrat Falls hydroelectric plant to the island part of Newfoundland and Labrador.

The Project is expected to cost \$6.9 billion and will be financed in part by the Province through equity contributions to Nalcor Energy. The expected commitment will be approximately \$1.9 billion. In addition, the Province has committed to funding all contingent equity which may be required to cover cost overruns on each aspect of the Project. The Project has also been financed through an issuance of bonds by Nalcor Energy's project subsidiaries in the amount of \$5.0 billion. The bonds are fully guaranteed by the Government of Canada. The Province has also provided a guarantee to the Government of Canada to compensate it for any costs under this Guarantee which are triggered by legislative or regulatory actions of the Province.

The size and complexity of the development creates considerable risk that the Province and the proponents will have to carefully manage in the construction phase. Ultimately, any risks related to project execution (including costs and timing) will be borne by the taxpayers, ratepayers, or both.

As at November 15, 2013, Nalcor Energy and/or its subsidiaries had spent or committed \$1.8 billion related to the Project.

## Reports issued pursuant to Section 15(1) of the Auditor General Act

Section 15(1) of the *Auditor General Act* (the *Act*) requires the Auditor General to report to the Lieutenant-Governor in Council instances the Auditor General becomes aware of during the course of an audit which may involve improper retention or misappropriation of public money or another activity that may constitute an offence under the Criminal Code or another Act. Section 31 of the *Act* requires the report be made through the Minister of Finance. In addition, Section 15(2) of the *Act* requires that I attach to my annual report a list containing a general description of the incidents and the date reported to the Lieutenant-Governor in Council. The following incidents were reported to the Minister of Finance in connection with audits performed for the years ended March 31, 2012, and March 31, 2013:

- During the audit of the Department of Transportation and Works for the year ended March 31, 2012, a matter came to my attention related to the retention and control of cash receipts at a ferry terminal in the Province. Officials of the Department informed my Office that a suspected misappropriation of public money had been detected. Officials of the Department forwarded the matter to the police for investigation. I reported this matter to the Minister of Finance on April 5, 2013.
- During the audit of the Department of Transportation and Works for the year ended March 31, 2013, a matter came to my attention related to the misappropriation of cash receipts at a ferry terminal in the Province. Officials of the Department informed my Office that a suspected misappropriation of public money had been detected during the year ended March 31, 2013. Officials of the Department forwarded the matter to the police for investigation. I reported this matter to the Minister of Finance on August 30, 2013.

- During the audit of the Consolidated Revenue Fund for the year ended March 31, 2013, I made inquires of management related to fraud, as required by Canadian Auditing Standards. As a result of these enquires, I was made aware of the following:
  - Officials of Service NL informed my Office of a possible instance of employee fraud.
     Service NL officials indicated that the employee involved has been suspended with pay pending the outcome of an investigation by the Strategic Human Resource Management Unit and the Professional Services and Internal Audit Division. I reported this matter to the Minister of Finance on December 2, 2013.
  - Officials of the Department of Child, Youth and Family Services informed my Office of three instances of possible fraud. Officials of the Department informed my Office that in one of the instances the matter was heard in Court and sent over for plea. Officials of the Department further indicated that the remaining two instances have been referred to the police for follow-up. I reported this matter to the Minister of Finance on December 2, 2013.

## Acknowledgements

I acknowledge the cooperation and assistance my Office has received from the Office of the Comptroller General during the completion of the audit, as well as from officials of the various Government departments and Crown agencies. I also thank the entire staff of the Office of the Auditor General for their hard work, professionalism and dedication.

TERRY PADDON, CA Auditor General

## Intentionally Left Blank

## CHAPTER 3 INTRODUCTION

## Background

This Report provides information on the Consolidated Summary Financial Statements of the Province of Newfoundland and Labrador for the year ended March 31, 2013. These financial statements are the principal means by which Government reports to the House of Assembly and to all Newfoundlanders and Labradorians on its stewardship of public funds.

This Report presents commentary on certain financial information contained in the financial statements. Two appendices are also included. Appendix I presents answers to questions which are frequently asked in relation to the Public Accounts, while Appendix II presents a glossary of terms used in the Public Accounts.

## Legislative Requirements

In accordance with section 59 of the *Financial Administration Act (FAA)*, Government prepares a report called the Public Accounts. In accordance with the *FAA*, the Public Accounts must show:

- the state of the public debt;
- the revenue and expenditure;
- all compromises, remissions, refunds and amounts written off; and
- those other accounts and statements that may under good accounting practice be required to show the financial position of the Province at the end of the fiscal year.

Under section 19 of the *Transparency and Accountability Act*, the Comptroller General is required to include (consolidate) the audited financial statements of Government entities in the Public Accounts.

Treasury Board prescribes the manner and form in which the Public Accounts of the Province are prepared, as provided by the *FAA*.

Section 11 of the *Auditor General Act* requires that the Auditor General express an opinion as to whether the financial statements required by the *FAA* to be included in the Public Accounts present fairly the financial position, results of operations and changes in the financial position of the Province in accordance with the disclosed accounting policies of the Provincial government and on a basis consistent with that of the preceding year, together with reservations the Auditor General may have.

## Consolidated Summary Financial Statements

The Consolidated Summary Financial Statements reflect the financial position and annual operating results of all organizations in the Government Reporting Entity (GRE). The statements provide the most complete information about the operating results and financial position of the Province. They combine the results of operations of the Consolidated Revenue Fund, which accounts for the financial activities of the central Government and departments, with those of other Government entities.

The GRE consists of government departments and all organizations the Province controls. Control is defined as the power to govern the financial and operating policies of another organization with expected benefits or the risk of loss to the government from the other organization's activities.

Organizations in the GRE are shown in Table 1. The organizations in the GRE include Government Business Enterprises (GBEs), school districts, health boards, government not-for-profit organizations, and other government organizations.

GBEs generate their revenues by selling goods or services outside of the GRE. Their operations are self-sustaining - they do not rely on government funding. The GBEs are Nalcor Energy and the Newfoundland and Labrador Liquor Corporation. The accounting for GBEs is significantly different from all of the other organizations in the GRE, reflecting their self-sustaining nature.

The Consolidated Summary Financial Statements are prepared in accordance with Canadian Public Sector Accounting Standards established for governments by the Public Sector Accounting Board of the Canadian Institute of Chartered Accountants (PSAB). The significant accounting policies of the Province are contained in the notes to the Consolidated Summary Financial Statements.

Under Canadian Public Sector Accounting Standards, a summary reporting model is the only appropriate reporting model for governments. This requires that all entities in the GRE be consolidated in summary financial statements – this model is adopted by the Province of Newfoundland and Labrador.

For the year ended March 31, 2013, the Public Accounts contains the Consolidated Summary Financial Statements, the Independent Auditor's Report on those financial statements, and other information which Government is required to include or chooses to include.

## Responsibility for the Public Accounts

Government, through the Comptroller General, is responsible for providing the House of Assembly with the Province's financial statements (the Public Accounts), prepared in accordance with Canadian Public Sector Accounting Standards, the standards which are considered to be generally accepted accounting principles (GAAP) for Canadian governments.

The Comptroller General is responsible for preparing the Consolidated Summary Financial Statements, including related notes and schedules. To prepare financial statements in accordance with GAAP, the Comptroller General is required to make judgments, estimates and assumptions that affect the application of accounting policies and the reported amounts of assets, liabilities, revenue and expenses.

The Consolidated Summary Financial Statements include a Statement of Responsibility, signed by the Minister of Finance and President of Treasury Board and the Comptroller General. Government is responsible for maintaining a system of internal control in order to provide reasonable assurance that transactions are properly authorized, assets are safeguarded, financial records are properly maintained, and to prepare summary financial statements that are free from material misstatement whether due to fraud or error.

## **Independent Auditor's Report**

The responsibility of the Office of the Auditor General is to perform an audit of the Consolidated Summary Financial Statements in accordance with Canadian generally accepted auditing standards (GAAS). The Office forms an opinion based upon the results of the audit and, in accordance with GAAS, issues an Independent Auditor's Report on the Consolidated Summary Financial Statements.

Some key points about the Independent Auditor's Report are:

## Level of Assurance

The audit is designed to obtain reasonable, but not absolute, assurance that the Consolidated Summary Financial Statements, as a whole, are free of material misstatement. It is not possible to provide absolute assurance in a financial statement audit because it is not practical to examine 100% of transactions (due to volume), internal control systems have inherent limitations (due to control override potential), and much audit evidence is persuasive rather than conclusive.

Reasonable assurance means that sufficient appropriate audit evidence has been obtained to reduce audit risk to an acceptably low level to support the conclusion that the financial statements are free of material misstatement. This is consistent with GAAS.

## Materiality

The Independent Auditor's Report provides an opinion on whether the Consolidated Summary Financial Statements present fairly, in all material respects, the consolidated financial position of the Province at a point in time (e.g.; March 31, 2013), and the consolidated results of its operations, the change in its net debt, the change in its accumulated deficit, and its cash flows for the year then ended (e.g.; the year ended March 31, 2013) in accordance with Canadian Public Sector Accounting Standards.

Audit procedures are performed to detect material misstatements in the financial statements. Materiality means how significant a financial statement omission or misstatement, either individually or in the aggregate, would need to be in order for such omissions or misstatements to be expected to influence or change the decisions of reasonably knowledgeable users relying on those financial statements. Guidance is provided by GAAS and professional judgment is exercised in order to set an overall level of materiality for the audit.

All errors or misstatements noted during the audit are accumulated and an assessment is made whether they would individually, or in aggregate, cause the financial statements to be materially misstated, based on the level of materiality chosen for the audit or because of other qualitative considerations associated with the information irrespective of the magnitude of the misstatement or omission.

## Audit procedures and evidence

An audit involves performing procedures to obtain audit evidence about the amounts and disclosures in the Consolidated Summary Financial Statements. The procedures selected depend on the auditor's judgment, including an assessment of risks of material misstatement of the Consolidated Summary Financial Statements, whether due to fraud or error.

Internal controls relevant to the preparation of the Consolidated Summary Financial Statements are considered in order to design audit procedures, but not for the purpose of expressing an opinion on the effectiveness of Government's system of internal controls.

The audit also includes evaluating the appropriateness of accounting policies used and the reasonableness of accounting estimates made by Government, as well as evaluating the overall presentation of the Consolidated Summary Financial Statements.

### **Audit Opinion**

An unqualified audit opinion was issued on the Consolidated Summary Financial Statements for the year ended March 31, 2013, concluding that they were fairly presented, in all material respects, in accordance with Canadian Public Sector Accounting Standards.

We have not provided an opinion on the effectiveness of internal controls or whether Government exercised its fiduciary responsibilities - these are not the focus of a financial statement audit. If we have suggestions of any means to improve controls or management practices during our audit, we discuss them with Government and communicate these findings in writing to Government. This is consistent with GAAS.

# CHAPTER 4 UNDERSTANDING THE CONSOLIDATED SUMMARY FINANCIAL STATEMENTS

### Introduction

The Consolidated Summary Financial Statements present the most comprehensive view of the financial position of the Province as at March 31, 2013. Included with the financial statements, the Department of Finance provides a commentary - *Understanding the Financial Health of the Province of Newfoundland and Labrador*. This commentary is intended to provide readers of the financial statements with additional tools to be able to assess the information contained in the financial statements.

The Office of the Auditor General also adds to the understanding and interpretation of the financial results. This report contains additional commentary and highlights specific issues we feel are important to understanding the financial condition of the Province.

## Understanding the Consolidated Summary Financial Statements

While the Budget outlines Government's plan for the coming fiscal year, the Consolidated Summary Financial Statements are the financial report card of the actual results for a fiscal year. The Province's fiscal year runs from April 1 to March 31. The financial statements are a comprehensive document consisting of five individual statements as well as explanatory notes and schedules.

The five individual statements are each designed to provide separate pieces of information that are linked together to present an overall financial picture.

## **Consolidated Statement of Financial Position**

This statement provides a snapshot of the financial position of the Province at a point in time - the end of the fiscal year (e.g.; March 31, 2013). Comparative figures are also shown for the same point in time the previous year. This allows the reader to be able to make comparisons and consider trends related to financial results.

There are five main components that make up the financial position of the Province. Table 1 outlines the components of the Consolidated Statement of Financial Position at March 31, 2013.

Table 1

Consolidated Summary Financial Statements

Components of the Consolidated Statement of Financial Position

As at March 31, 2013

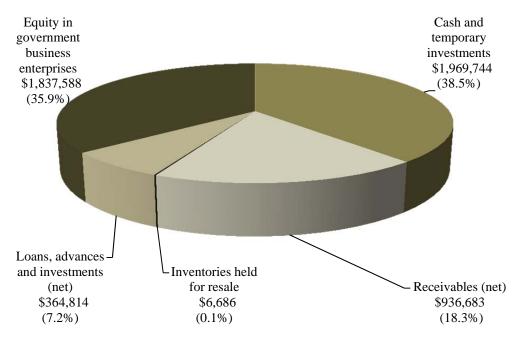

(\$000s)

Component	Amount
Financial Assets	\$ 5,115,515
Liabilities	13,463,260
Net Debt	8,347,745
Non-financial Assets	3,915,955
Accumulated Deficit	\$ 4,431,790

## Financial Assets

Financial assets are those that could be used to discharge existing liabilities or finance future operations. Chart 1 shows the financial assets of the Province for the year ended March 31, 2013.

Chart 1
Consolidated Summary Financial Statements
Financial Assets
As at March 31, 2013
(\$000s)

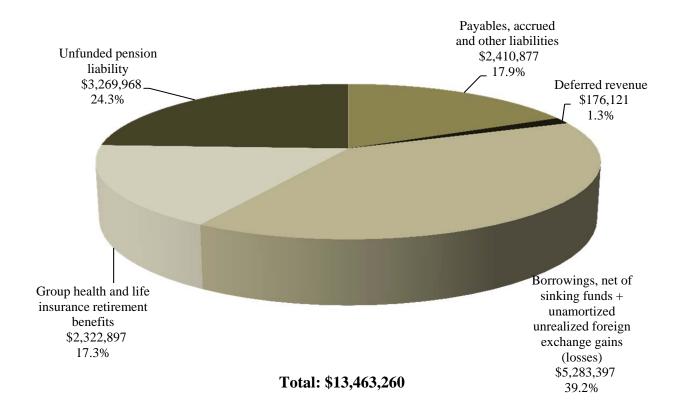

Total: \$5,115,515

Equity in Government Business Enterprises (GBEs) reflects the net assets (assets less liabilities) of Nalcor Energy and the Newfoundland and Labrador Liquor Corporation. This equity is used by these entities to generate a profit each year which accrues to the benefit of the Province.

## Liabilities

Liabilities represent amounts that are payable or will be required to be paid to third parties and include amounts payable in the normal course of operations, deferred revenue, amounts due to bond holders and other lenders that have provided money to finance the Province's operations and amounts the Province is responsible for related to employee future benefit obligations. Chart 2 shows the liabilities of the Province as at March 31, 2013.

Chart 2
Consolidated Summary Financial Statements
Liabilities
As at March 31, 2013
(\$000s)

## Net Debt

Net Debt represents the difference between liabilities and financial assets. This is one of the key measures that is used to evaluate the financial health of all senior governments in Canada.

The Province's Net Debt at March 31, 2013 was \$8.3 billion. (2012 - \$7.8 billion)

## Non-financial assets

The most significant non-financial assets are the Province's investment in tangible capital assets. These are, essentially, the physical assets that Government uses to deliver services to the people of the Province.

Tangible capital assets comprise such things as land, buildings, roads, equipment, vehicles and other items which have a useful life extending beyond one year.

Non-financial assets of the Province at March 31, 2013 were:

Prepaid expenses, deferred charges and inventories

• Tangible capital assets \$3.8 billion

0.1 billion

Total Non-financial Assets

\$3.9 billion

## Accumulated Deficit

As the name implies, this is the accumulated amount of deficits that the Province has incurred over time less any surpluses.

The accumulated deficit of the Province at March 31, 2013 was \$4.4 billion.

## **Consolidated Statement of Change in Net Debt**

This statement provides information on how Net Debt has changed from one year to the next. There are two main elements that impact Net Debt from year to year:

## 1. Surplus or deficit for the year

If the Province operates with a surplus for the year, this will reduce Net Debt. Similarly, a deficit will increase Net Debt.

## 2. Changes in Tangible Capital Assets

The acquisition of tangible capital assets increases Net Debt each year. This amount is adjusted for the net book value of any disposals of tangible capital assets during the year and by the amount of amortization which is already included in determining the surplus or deficit for the year.

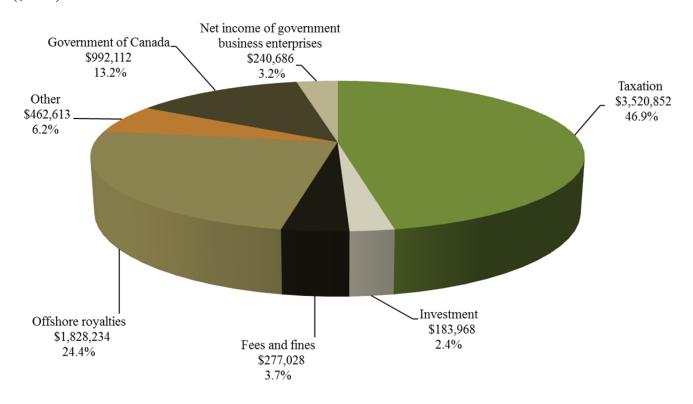

## **Consolidated Statement of Operations**

This statement shows the results of the complete operations of the Government Reporting Entity for the year April 1, 2012 to March 31, 2013, including the Consolidated Revenue Fund (central Government, Legislature and departments) and the 45 Crown corporations, boards, and authorities that are controlled by the Government of Newfoundland and Labrador. These results are compared to the original estimates that were presented to the legislature and approved as part of the budget process.

The statement provides the amount of revenue that the Province generated during the year and is broken down by major categories. Chart 3 shows the revenues of the Province by source for the year ended March 31, 2013. Approximately 24% of the Province's total revenues came from offshore royalties.

Chart 3

Consolidated Summary Financial Statements Revenues by Source
Year Ended March 31, 2013
(\$000s)

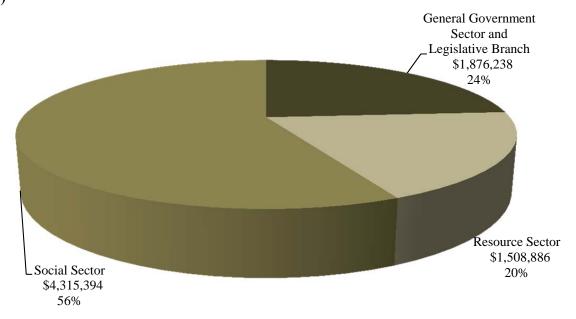

Total: \$7,505,493

The statement also provides information on the expenses incurred by the Province during the year by major functional area. Chart 4 shows the expenses of the Province by major functional area for the year ended March 31, 2013. Approximately 56% of the Province's total expenses of \$7.7 billion were spent in the social sector.

Chart 4

Consolidated Revenue Fund Financial Statements
Expenses by major functional area
Year Ended March 31, 2013
(\$000s)

Total: \$7,700,518

The difference between revenue and expense for the year is the annual surplus or deficit. When revenue exceeds expenses, a surplus results and, conversely, when expenses exceeds revenue, a deficit is the result.

The Province has recorded a deficit of \$195 million for the year ended March 31, 2013 (2012 - \$974 million surplus).

## **Consolidated Statement of Changes in Accumulated Deficit**

This statement provides the details of what comprises the change in accumulated deficit for the year. In general, the accumulated deficit is impacted by the annual surplus or deficit.

The accumulated deficit at the end of the fiscal year is also impacted by adjustments to the opening balance of accumulated deficit. For the year ended March 31, 2013, these adjustments primarily resulted from:

- First time adoption of Public Sector Accounting Standards by certain entities forming part of the GRE.
- Differences between the accounting policies of the Consolidated Revenue Fund and those of a Government Business Enterprise.

### **Consolidated Statement of Cash Flows**

This statement provides useful information to the reader regarding how cash resources were generated during the year and how they were used. The 4 main categories that cash is provided from or applied to are:

- Operations
- Capital Transactions
- Financing Activities
- Investing Activities

## **Notes to the Consolidated Financial Statements and Schedules**

The Notes and Schedules provide considerable additional detail and explanation around information contained in the financial statements. The notes are an integral part of the financial statements.

# CHAPTER 5 THE FINANCIAL CONDITION OF THE PROVINCE

### Introduction

The commentary prepared by the Department of Finance, *Understanding the Financial Health of the Province of Newfoundland and Labrador*, is included with the Public Accounts Volume I, Consolidated Summary Financial Statements. It highlights certain elements of the financial statements and also provides commentary and analysis on certain key indicators of the financial condition of the Province. Individuals are encouraged to read this commentary.

In this chapter, we provide commentary on the financial condition of the Province. Certain key financial indicators are examined in detail. Where appropriate, and available, comparative information from other provinces in Canada has been included. We have included data for a ten year period (where available) which should allow readers of this report and the financial statements to look at long-term trends which provide further indicators of whether a government is living within its means and whether financial circumstances are improving or deteriorating. To further allow readers to assess expected future direction, we have also included forecasted information, where available. The forecasted financial information for 2014 was obtained from the Fall Update 2013-14; while the forecasted financial information for 2015 and 2016 was obtained from Budget 2013.

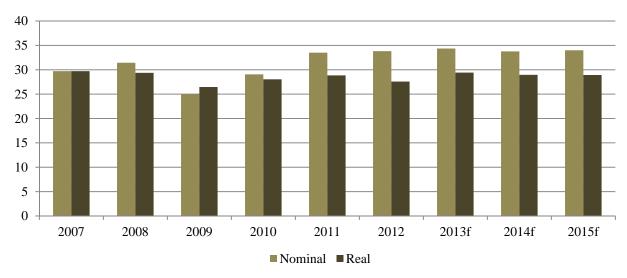

## **Economic Growth**

## Significant growth in GDP

Newfoundland and Labrador has undergone a period of economic growth over the past ten years. Increased activity in the resource sector, aided by major development projects, has resulted in growth in gross domestic product (GDP) and other related economic indicators. This activity, as well as a substantial increase in commodity prices, has impacted Government revenues over the period.

Chart 1 shows real and nominal GDP for the Province for the years 2007 to 2012, as well as the forecast for 2013 to 2015.

Chart 1
Province of Newfoundland and Labrador
Nominal and Real GDP
Years ended
(\$ Billions)

Source: Statistics Canada

Real GDP decreased from \$29.7 billion in 2007 to a forecast amount of \$29.4 billion in 2013. During the same period, nominal GDP increased from \$29.7 billion to \$34.4 billion, representing an average annual growth of about 3% per year.

During the past seven years, nominal GDP has increased while real GDP has declined slightly. As real GDP indicates the effect of changing levels of production of goods and services in the Province each year, a slight decline in the real GDP would indicate that there has been a slight decline in the level of goods and services produced during this time period. The increase in nominal GDP during the same time period highlights the significant impact that increasing commodity prices have had on GDP growth over the period.

Chart 1 also highlights the impact of the volatility of commodity prices on the Province's GDP. For example, from 2009 to 2010, nominal GDP increased by \$4.1 billion while the real GDP only increased by \$1.6 billion. Also, from 2008 to 2009, nominal GDP decreased by \$6.5 billion, which is significantly more than the decrease of \$2.9 billion in real GDP. This represents a tremendous decline in commodity prices over the short period of time.

## Province is impacted by global economy

Another important factor when considering the financial condition of the Province is the volatility of revenue sources, particularly the larger revenue sources such as oil royalties and mining tax. A major factor affecting revenues related to commodity based sources is the price of those commodities. Commodity prices are impacted, to a large extent, by the strength of the global economy.

The global recession of 2009 had a significant impact on Newfoundland and Labrador. The economy contracted and Provincial revenues declined considerably - the result of an associated decline in commodity prices. Economic forecasters still see a period of low to moderate growth ahead, reflecting the continued fragility of the global economy. This uncertainty will impact provincial finances in the short to medium term.

## **Surplus/(Deficit)**

## Increased GDP has contributed to increased surpluses

Consistent with the economic growth over the past ten years, the Province has also recorded surpluses in six of the past ten years (Chart 2) and its ability to raise revenue and support debt has improved during this period.

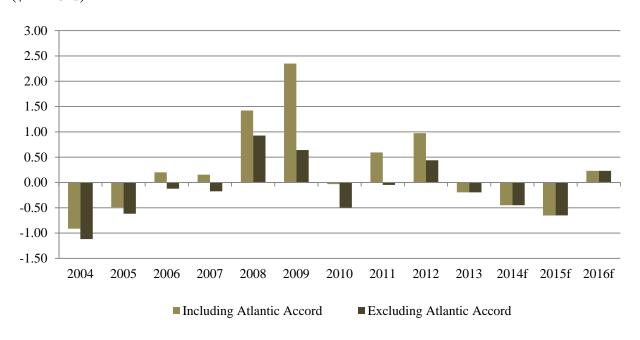

However, the surpluses that the Province has experienced in recent years have primarily been the result of increased offshore royalties and payments received from the Federal Government under the Atlantic Accord Agreements. The amount of revenue received from offshore royalties is dependent upon world oil prices and/or production levels. World oil prices are highly volatile and production levels relating to non-renewable resources can vary significantly. Changes in these factors can result in significant variability in revenue from year to year.

The net cumulative value of the surpluses less deficits for 2003-04 to 2012-13 is \$4.1 billion. This has contributed to the reduction in Net Debt of \$3.1 billion since 2003-04.

## Deficits projected in 2 of the next 3 fiscal years

Chart 2 shows the actual surplus (deficit) for the years ended March 31, 2004 to 2013 and the projected surplus (deficit) for the years ending March 31, 2014 to 2016.

Chart 2
Consolidated Summary Financial Statements
Surplus (Deficit)
Years Ended March 31
(\$ Billions)

The Province is forecasting 2 years of deficits in 2013-14 and 2014-15 before a forecast return to surplus by 2015-16. Including the deficit reported for 2012-13, the cumulative deficit expected over the next three years is approaching \$1.5 billion.

Chart 2 also shows the impact that payments received under both the Atlantic Accord 1985 and the Atlantic Accord 2005 have had on the surpluses or deficits recorded for the years ended March 31, 2004 to 2012. Since 2003-2004, the Province has received approximately \$4.8 billion under these agreements. The net cumulative value of surpluses over the past ten years of \$4.1 billion would have been a net cumulative deficit of approximately \$0.7 billion in the absence of revenue from the Atlantic Accord agreements. 2011-12 was the last year that the Province received any payments under the Atlantic Accord agreements.

As Government plans for the medium term, it will have to consider a number of alternative options to deal with expected deficits - increasing revenue, decreasing expenses, borrowing or a combination of all. A major consideration in determining a response will be whether any expected deficit is viewed as being temporary or more sustained. The answer will, to a large extent, depend on expectations of commodity prices and production levels.

#### **Net Debt**

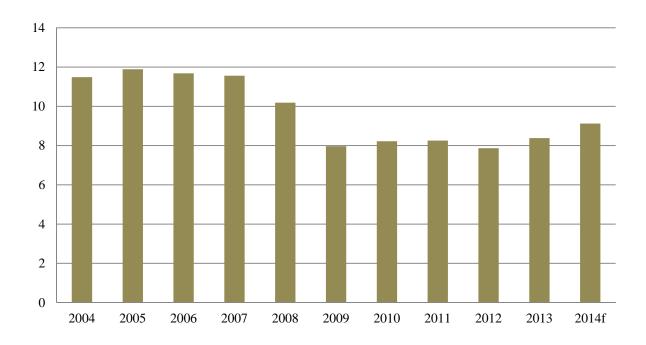

The Consolidated Statement of Financial Position provides details of the components of Net Debt. In simple terms, Net Debt equals all the liabilities of the Province less its financial assets. Net Debt of the Province at March 31, 2013 was \$8.3 billion.

Liabilities are amounts that the Province owes others. Liabilities consist of those items which are payable for items purchased in the ordinary course of doing business, amounts borrowed and which will be repaid over a longer time frame and obligations related to employee future benefits. These benefits include pensions and group health and life insurance.

Financial assets are amounts that the Province has available to pay its liabilities or finance future operations. Financial assets consist of cash and temporary investments, amounts receivable from third parties, inventories held for resale and equity in government business enterprises (GBEs). The GBEs of the Province of Newfoundland and Labrador are Nalcor Energy and its subsidiaries and the Newfoundland and Labrador Liquor Corporation.

Chart 3 shows Net Debt for the years ended March 31, 2004 through to the forecast amount at March 31, 2014.

Chart 3 **Consolidated Summary Financial Statements Net Debt Years Ended March 31** (\$ Billions)

**Factors** impacting Net **Debt** 

Net Debt is impacted by surpluses or deficits and the purchase of tangible capital assets less related amortization.

In order to reduce Net Debt, Government will need to record surpluses greater than the net change in its tangible capital assets.

At March 31, 2013, Net Debt had declined by approximately \$3.5 billion from its peak in 2004-05. Net debt has remained relatively stable over the period from March 31, 2009 to March 31, 2012, despite significant surpluses in 2010-11 and 2011-12. The beneficial impact of surpluses on Net Debt has been primarily offset by acquisitions of tangible capital assets during these periods.

In 2012-13, Net Debt has increased by \$511 million. Continued investment in tangible capital assets combined with a significant deficit has contributed to the rise in Net Debt. While no information has been provided as to the expected level of spending on tangible capital assets in 2014-15, the forecasted deficits totaling approximately \$1.1 billion for the 2013-14 and 2014-15 indicate Net Debt will rise at least by that amount in addition to any spending on tangible capital assets.

The level of Net Debt by March 31, 2015 may realistically be expected to approach the levels of 2008.

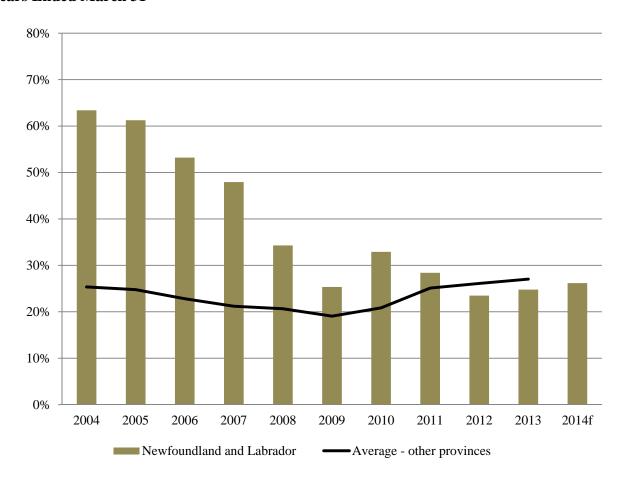

#### Net Debt as a percentage of provincial GDP

GDP is a measure of the value of goods and services produced in a jurisdiction in one year. It is the measure most often used to indicate the size and strength of a provincial economy. Government must manage its revenue raising and spending practices in the context of the economy of the Province.

GDP provides an indication of the ability of the Province to raise revenue and support debt. The financial demands placed on the economy by Government spending and revenue raising practices can be assessed for sustainability by comparing the level of Net Debt to provincial GDP.

Chart 4 shows Net Debt as a percentage of GDP from 2004 to 2014.

Chart 4
Consolidated Summary Financial Statements
Net Debt as a Percentage of GDP
Years Ended March 31

As a result of improving economic conditions and an improved overall financial position of the Province, Net Debt as a percentage of GDP has declined from a high of 63.4% in 2004 to 24.7% in 2013. Furthermore, in 2013 the Province's Net Debt as a percentage of GDP was lower than the average of all other provinces.

Net Debt as a percentage of GDP has deteriorated in 2013 as a result of a deficit recorded for the year. Given that deficits are forecast for 2013-14 and 2014-15, this indicator is likely to continue to further deteriorate in the near term.

## Net Debt as a percentage of total annual revenue

Net Debt is the amount which the government of the day leaves for future governments to repay. The ability to repay this debt is dependent, to a large extent, on the ability of the Province to generate sufficient revenue in the future.

It is useful to compare Net Debt to total annual revenue. A percentage that is increasing would indicate that more time will be needed to repay Net Debt and may not be sustainable.

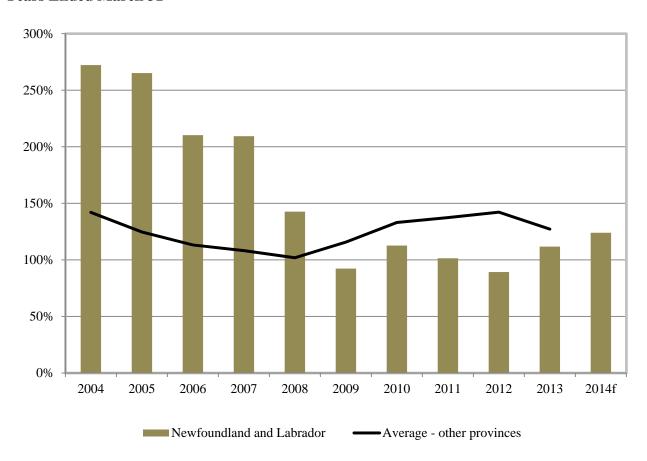

Chart 5 shows Net Debt as a percentage of total annual revenue from 2004 to 2014.

Chart 5

Consolidated Summary Financial Statements

Net Debt as a percentage of total annual revenue

Years Ended March 31

Net Debt as a percentage of total annual revenue has improved considerably since 2004 and has averaged approximately 101% from 2009 to 2013. This would indicate an improved ability to repay Net Debt.

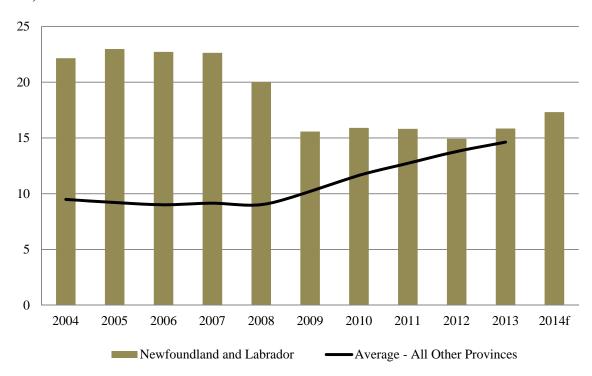

However, Net Debt as a percentage of total annual revenue has risen to approximately 111% in 2013 and is expected to rise to approximately 124% in 2014. If this trend continues, the Province would have more difficulty repaying Net Debt in the future.

## **Net Debt Per Capita**

Government target for Net Debt per capita In Budget 2012, Government established a target of having Net Debt per capita equal the average of all other provinces within 10 years. Chart 6 shows the Province's Net Debt per capita as compared to the average of all other provinces for the years March 31, 2004 to 2014.

Chart 6

Province of Newfoundland and Labrador
Net Debt per Capita Compared to Average of All Other Provinces
Years Ended March 31
(\$000s)

Source: Public Accounts - all provinces; Statistics Canada

By March 31, 2013, the Province's Net Debt per capita of the Province is nearing the average of that of all other provinces. While the Provincial Net Debt per capita has improved considerably since 2007-08, the average of all other provinces' has deteriorated since that time. If Government incurs deficits in the future, it may become more difficult to achieve and maintain its target.

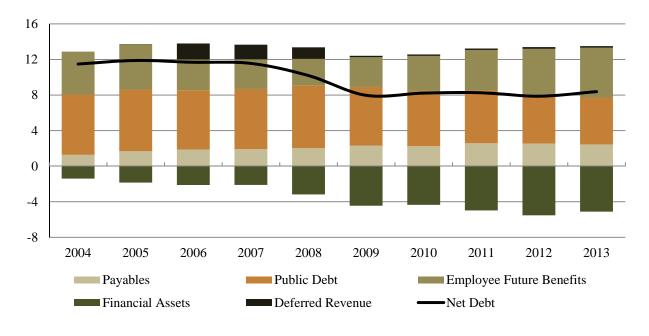

For the year ended March 31, 2013, the Province's Net Debt per capita has increased by approximately \$900, from approximately \$14,900 to approximately \$15,800. The deficit of \$195 million for the year ended March 31, 2013, contributed to this increase. Furthermore, the Province's Net Debt per capita is expected to increase to approximately \$17,300 by March 31, 2014.

## **Components of Net Debt**

While the overall level of Net Debt has declined since its peak at March 31, 2005, the component parts show mixed results. Chart 7 shows the components of Net Debt for the years ended March 31, 2004 to 2013.

Chart 7

Consolidated Summary Financial Statements
Net Debt and its Components
Years Ended March 31
(\$ Billions)

#### **Financial Assets**

Financial assets have increased by approximately \$3.7 billion from 2003-04 Cash and temporary investments have increased by approximately \$1.7 billion, other financial assets have increased by approximately \$0.7 billion, and equity in government business enterprises has increased by approximately \$1.3 billion over this period.

#### **Public Debt**

The Public Debt component, the actual borrowing of Government in capital markets, has decreased by approximately \$1.5 billion from 2003-04 to 2012-13. This has occurred, primarily, because debt has been repaid as it has come due.

## **Employee Future Benefits**

On the other hand, the liability for employee future benefits has seen significant variability over the same period. Employee future benefits include obligations related to Provincial employee pension arrangements and group health and life insurance benefits which are generally cost shared with provincial retirees.

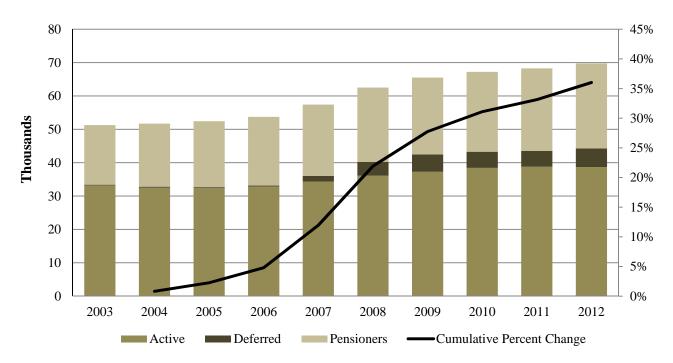

#### Pension Beneficiaries

The unfunded liability related to Government sponsored pension plans arises from the nature of the plans and the legislative framework around the plans. The Province provides its employees with a "defined benefit" plan which promises to pay specified amounts upon retirement. If there are insufficient funds available to meet this obligation, the Province is responsible for any shortfall. The *Pension Funding Act* provides a deficiency guarantee by the Province to cover any deficiency shortfall under the Government employee pension plans.

Chart 8 shows the number of Public Service Pension Beneficiaries (individuals who are active participants, have a pension benefit deferred, or are receiving pension benefits) for the years ended December 31, 2003 to 2012.

Chart 8

Province of Newfoundland and Labrador Public Service Pension Beneficiaries Years Ended December 31

Source: Department of Finance

As Chart 8 indicates, the number of Public Service Pension Beneficiaries has increased from approximately 51,000 in 2003 to approximately 70,000 in 2012 - an increase of 19,000 or 37%. Of this increase, 7,700 or 43% is the result of an increase in the number of individuals receiving pension benefits. The increase in the number of beneficiaries has contributed to the increase in obligations related to employee future benefits.

#### **Pension Plans**

Note 7 to the Consolidated Summary Financial Statements provides detail as to the determination of the unfunded pension liability. Six pension plans are included in the determination of the liability:

- Public Service
- Teachers'
- Memorial University of Newfoundland

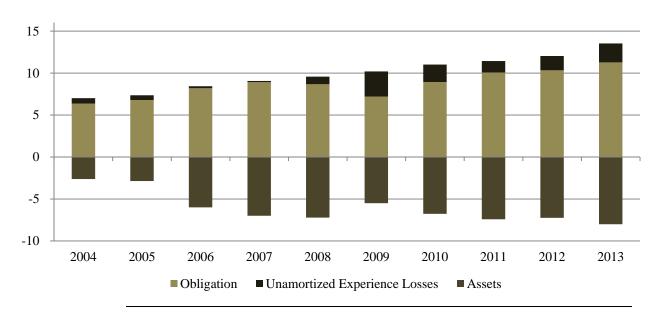

- Uniformed Services
- Members of the House of Assembly
- Provincial Court Judges'

Actuaries measure the expected pension benefits to be paid to employees over time. This measurement would take into consideration such factors as expected changes in wage rates, expected retirement dates and mortality rates. Actuaries estimate the assets required today, and which would be expected to earn a return over the long term, in order to be able to pay the expected benefits as they come due. If the assets which are currently available are less than the actuary indicates should be available, the difference represents the unfunded pension liability. In other words, insufficient money is available today to be able to meet future obligations.

The money that currently is available for pensions is invested in a variety of areas - equities, bonds and real estate. Actuaries make an assumption as to the overall annual expected earnings of these investments. The current assumptions range from 6.0% to 6.75%.

Chart 9 shows the components of the Province's unfunded pension liability for the years ended March 31, 2004 to 2013.

Chart 9
Consolidated Summary Financial Statements
Unfunded Pension Liability Components
Years ended March 31
(\$ Billions)

## **Group Health and Life Insurance**

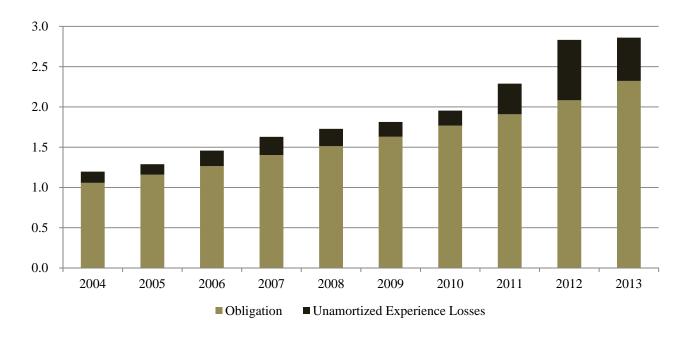

Active and retired public sector employees and Members of the House of Assembly are eligible to participate in group health and life insurance plans. Once an employee retires, the Province continues to cost share these premiums.

As at March 31, 2013, the plans provided benefits to a total of 22,455 retirees. This represents a 6.3% increase in beneficiaries in just one year. Obligations for retirement benefits result from a commitment by Government to provide benefits to employees on retirement in return for their current services. Extended health care and life insurance benefits for retirees are a form of compensation offered for current services rendered by employees and accrue over the years employees work.

Chart 10 shows the components of the group health and life insurance liability for the years ended March 31, 2004 to 2013.

Chart 10

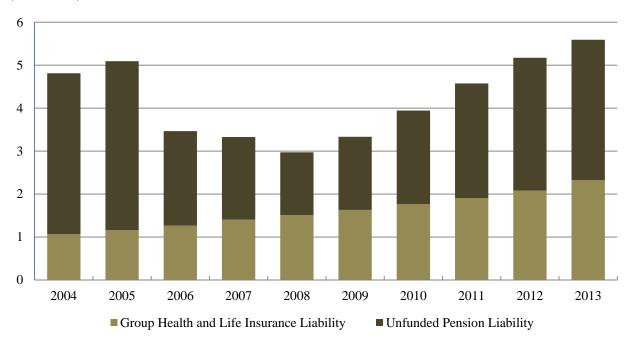

Consolidated Summary Financial Statements
Group Health and Life Insurance Liability Components
Year Ended March 31, 2013
(\$ Billions)

## **Combined Liability**

Chart 11 shows total employee future benefits liability for the years ended March 31, 2004 to 2013.

Chart 11
Consolidated Summary Financial Statements
Employee Future Benefits Liability
Years Ended March 31
(\$ Billions)

Unfunded liability for employee future benefits continues to increase The unfunded liability related to employee future benefits declined significantly in 2005-06, the year the \$2 billion advance payment under the Atlantic Accord 2005 was directed to the Teachers' Pension Plan. In addition, further special payments totaling approximately \$1.6 billion were made between 2006 and 2013 to address the unfunded pension liability. Since 2007-08, the unfunded liability has increased, such that, at March 31, 2013 the total unfunded liability is now greater than it was at March 31, 2005, despite in excess of \$3.6 billion in special payments over that period.

The increase in the unfunded liability for employee future benefits since 2005 was primarily caused by the following factors:

- Market risk associated with the pension fund assets. Pension assets are subject to market risk and were impacted dramatically by the stock market correction that occurred during 2008 and 2009. A significant portion of the Province's additional contributions to the pension assets were offset by the decline in the value of the assets resulting from this market correction. This highlights the inherently volatile nature of this liability. The impact of this market correction is presently being amortized into the liability over the estimated average remaining service life of the active participants of the retirement benefit plans.
- The obligation for group health and life insurance continues to increase each year as employees continue to earn benefits for services rendered. This obligation is not funded. Since 2004-05, the group health and life insurance obligation has increased from \$1.2 billion to \$2.3 billion - an increase of approximately 92%. The increase results from the increased cost of these plans and the increased number of provincial employees earning benefits.
- The liability for employee future benefits also increases each year because of the interest on the unfunded portion of the liability. Since 2004-05, the obligation has increased by \$2.7 billion as a result of interest.

#### **Unamortized Losses**

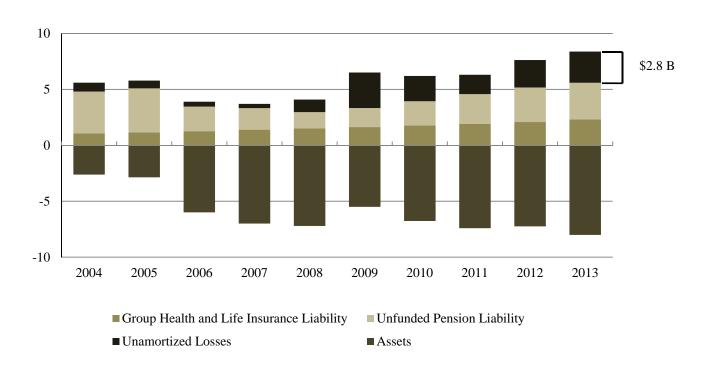

The liability for employee future benefits may change because actual experiences are different than those assumed by the actuary or if there are changes to the assumptions used by the actuary. Differences of this nature are referred to as experience gains and losses. Current accounting standards require that any experience gains and losses on employee future benefits be amortized over the estimated average remaining service life of the active participants. In other words, the full impact of the experience gains and losses on the liability is recognized over a longer period of time.

For the pension plans, this presently ranges from 7 to 16 years, depending on the pension plan. The amortization commences in the year subsequent to the year in which the experience gain or loss arose.

For the group health and life insurance benefits liability, this presently ranges from 11 to 13 years, depending on the plan. The amortization commences in the year subsequent to the year in which the experience gain or loss arose.

Chart 12 shows the total employee future benefits liability for the years ended March 31, 2004 through March 31, 2013, including unamortized losses.

Chart 12
Consolidated Summary Financial Statements
Employee Future Benefits Liability, including Unamortized Losses
Years Ended March 31
(\$ Billions)

The unamortized losses on employee future benefits ranged from \$0.8 billion to \$2.8 billion for the years ended March 31, 2004 to 2013. Without the ability to defer and amortize the experience losses, the employee future benefits liability would be much higher each year. Net Debt would also be higher as a result. For example, for the year ended March 31, 2013, the employee future benefits liability would have been \$8.4 billion, instead of \$5.6 billion as reported.

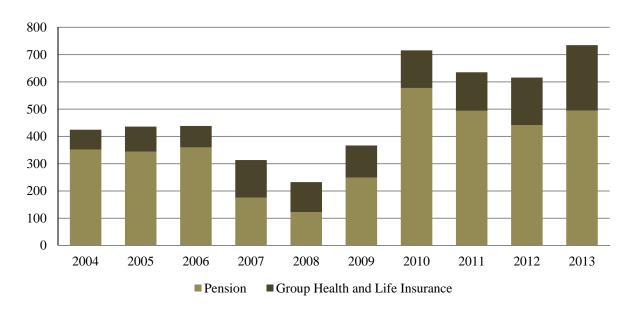

The amortization of these unamortized experience losses of \$2.8 billion over the next several years will result in a substantial increase in the unfunded liability for employee future benefits. Furthermore, additional experience gains or losses may occur in the future as previous actuarial assumptions are revised to reflect actual experiences or there are changes to the assumptions used by the actuary. These experience gains or losses will also impact the unfunded liability for employee future benefits.

#### Employee future benefits expense

Chart 13 shows the employee future benefits expense for the years ended March 31, 2004 to 2013.

Chart 13

Consolidated Summary Financial Statements
Employee Future Benefits Expense
Years Ended March 31
(\$ Millions)

As Chart 13 indicates employee future benefits expense has increased from \$233 million in 2007-08 to \$735 million in 2012-13 - an increase of \$502 million or 215%.

## Foreign currency debt to total government debt

A comparison of a government's foreign debt to its total debt (net of sinking fund assets) reflects the degree to which it is vulnerable to foreign currency swings.

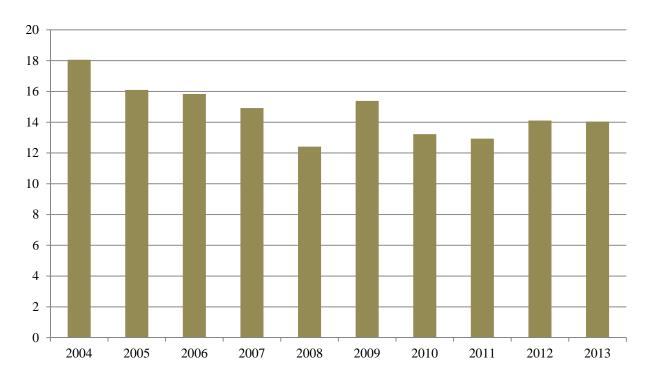

Chart 14 shows foreign currency debt to total government borrowings for 2004 to 2013.

Chart 14

Consolidated Summary Financial Statements

Foreign Currency Debt as a Percentage of Total Borrowings (Net of Sinking Funds)

Years Ended March 31

Foreign currency debt as a percentage of total borrowings has declined overall since 2004. However, as foreign currency debt still represents a significant portion of the Province's total borrowings, the Province is still vulnerable to changes in the exchange rates associated with this debt.

#### **Revenues**

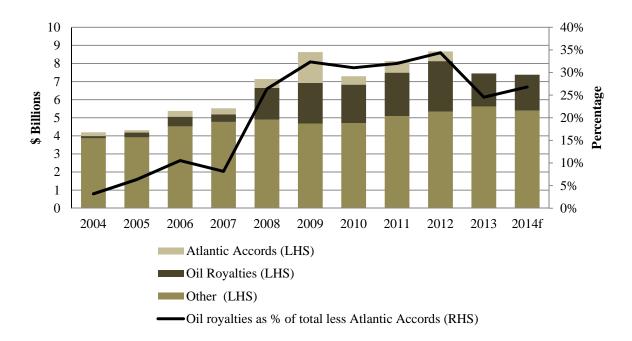

# Significance of oil royalties

As the significance of the offshore oil sector has impacted the overall economy of Newfoundland and Labrador, there is a corresponding growing reliance by Government on oil royalties to fund its programs and services. This revenue source as a percentage of revenues has increased substantially in recent years. In 2003-04, oil royalties were \$127 million, or 3.2% of total revenues, excluding revenues from the Atlantic Accords. In 2012-13, oil royalties were \$1.8 billion, or 24.4% of total revenues, an increase of \$1.7 billion.

The impact of oil production on the overall revenues of the Province is even greater considering that a significant portion of corporate income tax, personal income tax, and other direct, indirect and induced revenues result from activity in the offshore sector as well.

Chart 15 shows total revenues for the years ended March 31, 2004 to March 31, 2014.

Chart 15
Consolidated Summary Financial Statements
Revenues
Years Ended March 31

Oil royalties are a very volatile source of revenue for Government. The revenue that the Province receives from oil royalties depends on the level of oil production, the price of oil and the Canada-US dollar exchange rate. These factors are all outside Government's control, are subject to significant variability and are a challenge to forecast. In addition, oil is a non-renewable resource and, by its very nature, will decline over time.

Revenue from oil royalties declined by approximately \$1.0 billion from 2011-12 to 2012-13, a clear indication of the volatility of this revenue source. Meanwhile, oil royalties are only projected to increase by approximately \$0.2 billion between 2012-13 and 2013-14.

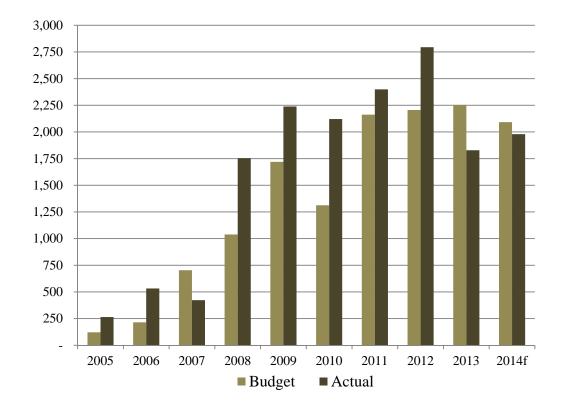

Given its lack of control over the factors that impact oil royalties, and its increasing reliance on this revenue source, Government has to carefully consider the degree to which it relies on this revenue source to fund its programs and services in the future.

Royalties difficult to forecast

Chart 16 shows the budget estimate and actual offshore royalties from 2005 to 2013, along with the budget and revised forecast for 2014.

Chart 16

Consolidated Summary Financial Statements Offshore Royalties: Budget and Actual Years Ended March 31 (\$ Millions)

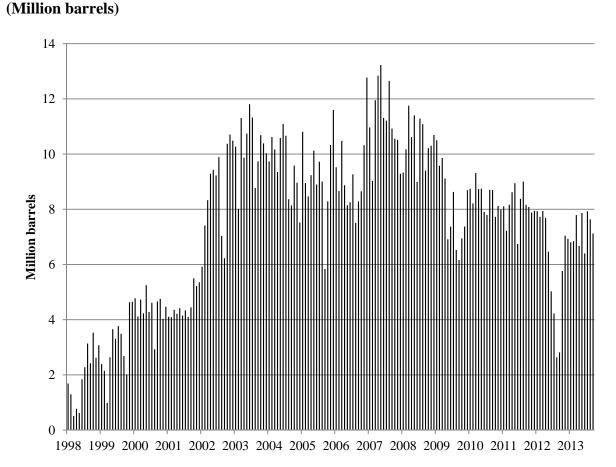

There have been significant differences between budget estimates and actual offshore royalties from 2005 to 2013 (and forecasted for 2014). Actual revenue from offshore royalties has exceeded the budget estimate for each year since 2005 with the exception of 2007 and 2013. For 2014, the actual revenue from offshore royalties is expected to be less than the budget estimate.

The difference between budget and actual demonstrates the uncertainty that exists in predicting offshore royalties.

Chart 17 shows monthly oil production for the period of January 1998 to September 2013.

Chart 17
Province of Newfoundland and Labrador

Monthly Oil Production
January 1998 to September 2013

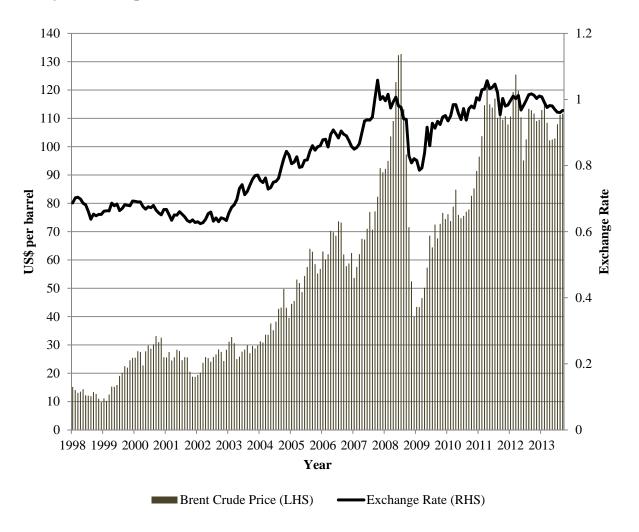

Source: Canada-Newfoundland and Labrador Offshore Petroleum Board, November, 2013

Monthly oil production is subject to significant variation. While 2012 production levels were impacted by scheduled downtime for maintenance, monthly oil production has shown an overall downward trend since 2007.

Chart 18 shows the average monthly spot price of Brent Crude and the Canada-US exchange rate from January 1998 to September 2013.

Chart 18

Brent Crude - Average Monthly Spot Price
Canada - US exchange rate
January 1998 to September 2013

Source: US Department of Energy – Energy Information Administration (Brent Crude price) Statistics Canada; Bank of Canada – (Canada-US Exchange Rate)

There have been significant fluctuations in the price of Brent Crude and the Canada-US exchange rate during this period.

Oil royalties are significant to the Provincial treasury and they are inherently difficult to forecast. Therefore, Government should consider this risk in its short and long-term expenditure planning.

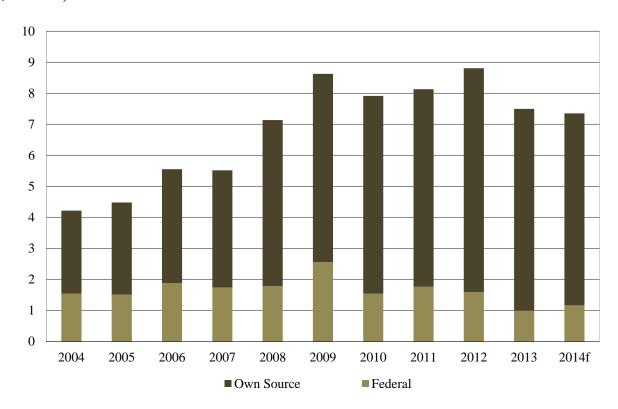

## Own source revenues as a percentage of GDP

The Government of Newfoundland and Labrador receives revenue from two general sources. The first is from within the Province and is referred to as "own source revenue". The second source is transfers from the Federal Government.

Own source revenue as a percentage of GDP gives an indication of the amount of revenue a government raises from the economy through such items as taxes, fees, and royalties. It provides an indication of the flexibility a government has to increase its financial resources through own source revenues.

Chart 19 provides information on own source and Federal revenues from 2004 to 2014.

Chart 19
Consolidated Summary Financial Statements
Federal and Own Source Revenues
Years Ended March 31
(\$ Billions)

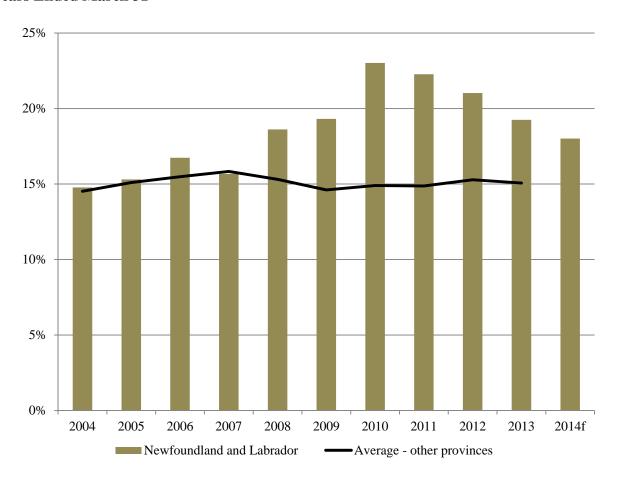

Although in excess of \$1.0 billion of our total revenue comes from the Federal Government, it has generally been declining over the past 10 years. At the same time, however, own source revenues have increased significantly since 2004.

The ability of the Province to generate own source revenues in the future depends upon the size and strength of the Provincial economy. Therefore, it is important to consider own source revenue in relation to the Provincial economy.

Chart 20 shows own source revenues as a percentage of GDP from 2004 to 2014.

Chart 20
Consolidated Summary Financial Statements
Own Source Revenue as a Percentage of GDP
Years Ended March 31

Revenue raised from sources within the Province, as a percentage of GDP, has increased from 14.8% in 2004 to a high of 23.0% in 2010 and is now dropping back to 19.3% in 2013. The Province now generates more income from the economy than it did in 2004, likely a reflection of the strength of the resource sector. Compared to the rest of Canada, it appears the Province may have a greater reliance on the resource sector.

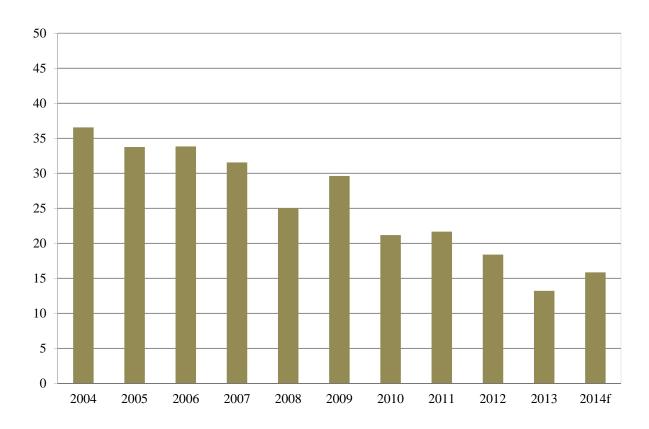

#### Federal Government revenues compared to total revenues

Federal Government revenues compared to total revenues reflects how dependent Government is on transfers from the Federal Government and how vulnerable Government is to changes in these transfers in its ability to finance its programs and services.

A significant portion of Government revenue consists of transfers from the Federal Government such as Health and Social Transfers and cost-shared programs. Newfoundland and Labrador does not currently receive equalization payments and, as such, is considered to be financially selfreliant. Equalization transfers are affected by each province's performance in relation to the performance of other provincial economies, and, therefore, are subject to change. However, given the current operation of the equalization formula, entitlements do not respond, on a timely basis, to changes in economic or financial circumstances.

Chart 21 provides information on the percentage of Federal revenues compared to the Province's total revenues from 2004 to 2014.

Chart 21
Consolidated Summary Financial Statements
Federal Revenues as a Percentage of Total Revenues
Years Ended March 31

Federal revenue as a percentage of total revenue has declined from 36.6% in 2004 to 13.2% in 2013. As Federal revenues have remained relatively constant over the past ten years, the improvement in the measure of Federal revenues as a percentage of total revenues is attributable to increases in own source revenues. The lower the percentage of Federal revenues as a percentage of total revenues, the less potential impact (i.e. the vulnerability) the Province has related to any change in these revenues.

## Offshore royalties as a percentage of own source revenues

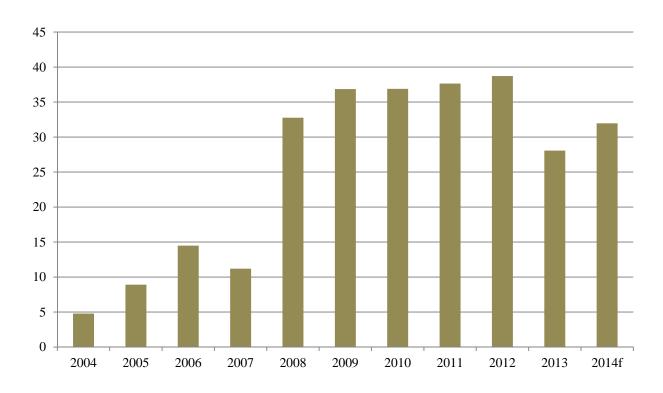

The reliance of the Government on offshore royalties to fund its programs and services has grown significantly in recent years. Offshore royalties have become the single largest source of revenue for Newfoundland and Labrador. In 2004 offshore royalties were \$127 million, while in 2013 offshore royalties were \$1.8 billion.

World oil prices are highly volatile and production levels relating to non-renewable resources can vary significantly. Therefore, changes in these factors can result in significant changes in revenue from year to year and differences between budget forecasts and actual results. As a result, Government's financial position can be significantly impacted by factors which are outside of its control.

Chart 22 shows the actual offshore royalties from 2004 to 2013 as a percentage of own source revenue, along with the forecast for 2014.

Chart 22

Consolidated Summary Financial Statements
Offshore Royalties as a Percentage of Own Source Revenues
Years Ended March 31

Offshore royalties as a percentage of own source revenues have grown from 4.8% in 2004 to 28.1% in 2013 - an increase of 23.3%. The forecast of 32.0% in 2014 represents a further increase of 3.9% from 2013 after a significant drop in 2013 from 2012.

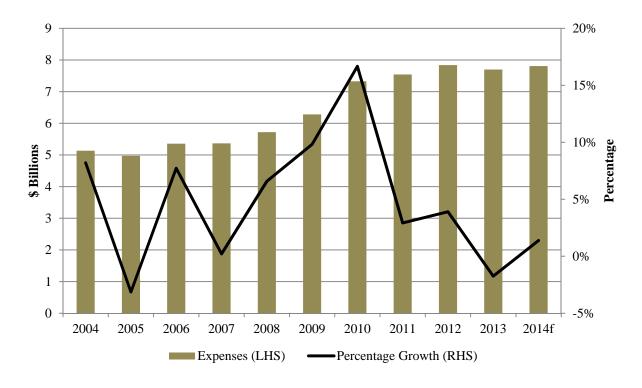

## **Expenses**

In its Budget for the year ending March 31, 2014, Government has projected deficits for the 2014 and 2015 fiscal years, meaning that expenses are expected to be at a level that exceeds revenues.

Chart 23 shows expenses, and the growth in expenses, for the years ended March 31, 2004 to 2014.

Chart 23

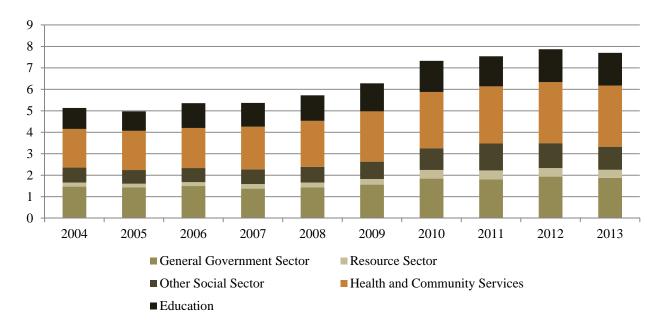

Consolidated Summary Financial Statements
Expenses and growth in expenses
Years Ended March 31

Since 2004, expenses have grown from \$5.1 billion to \$7.7 billion, an increase of \$2.6 billion, or 51.0 %. While expenses declined slightly in 2013, they are expected to increase by almost 1.4% in 2014 to \$7.8 billion.

Chart 24 shows expenses by sector, for the years ended March 31, 2004 to 2013.

Chart 24 **Consolidated Summary Financial Statements Expenses by sector Years Ended March 31** (\$ Billions)

During 2011-12, departmental reorganization resulted in certain expenses in the Social Sector being Note: transferred to the Resource Sector. For the purposes of this chart, expenses for the years 2011 through 2013 have been presented in a manner that is consistent with the financial results that were originally published in the Consolidated Summary Financial Statements prior to the occurrence of the departmental restructuring to facilitate comparability.

Since 2004, there has been a significant increase in spending in the Social Sector, where expenses have grown from \$3.5 billion to \$5.5 billion, an increase of \$2.0 billion or 57%. The Social Sector represented 71% of total spending for the year ended March 31, 2013. This growth in spending has occurred primarily in the areas of Health and Community Services and Education.

Spending for the Department of Health and Community Services has increased from \$1.8 billion (35% of total expenses) in 2004 to \$2.8 billion in 2013 (36% of total expenses). This increase of \$1.0 billion represents 38% of the total increase in all expenses of \$2.6 billion since 2004.

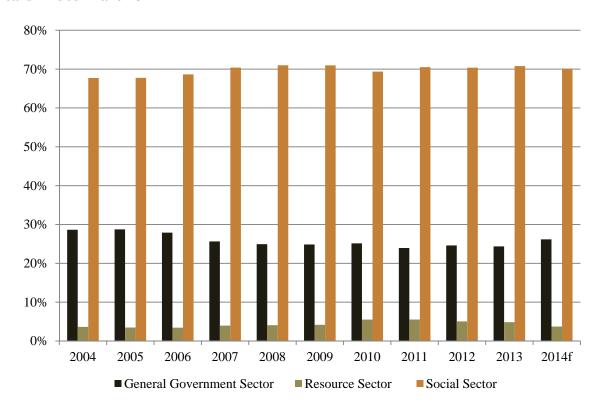

Spending for the Department of Education has increased from \$1.0 billion (19% of total expenses) in 2004 to \$1.5 billion in 2013 (19% of total expenses). This increase of \$0.5 billion represents 19% of the total increase in all expenses of \$2.6 billion since 2004.

# Expenses by sector (function) as a percentage of total expenses

A useful indicator to assess the degree to which a government can maintain existing programs is to examine the trend of government spending in particular functional areas, or sectors, over a period of time. A sector that grows at a much faster rate than total expenses may not be sustainable over the long term. Furthermore, this could impact the sustainability of other sectors or programs.

Chart 25 shows expenses by sector as a percentage of total expenses from 2004 to 2014.

Chart 25 **Consolidated Summary Financial Statements Expenses by Sector as a Percentage of Total Expenses Years Ended March 31** 

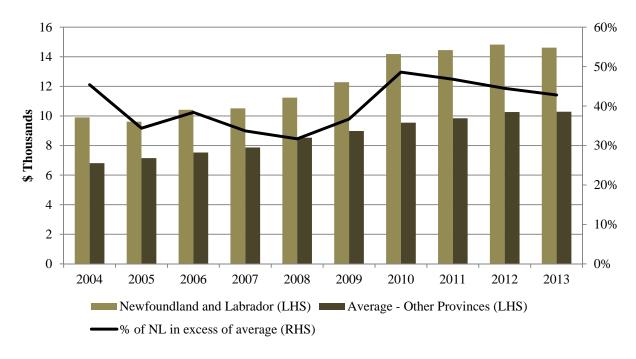

Note: During 2011-12, departmental reorganization resulted in certain expenses in the Social Sector being transferred to the Resource Sector. For the purposes of this chart, expenses for the years 2011 through 2014f have been presented in a manner that is consistent with the financial results that were originally published in the Consolidated Summary Financial Statements prior to the occurrence of the departmental restructuring to facilitate comparability.

> Spending in the Social Sector has been at least 68% of all Government spending for each year since 2003-04 and has grown from 68% to 71% of total Government spending during this time period. Meanwhile, the percentage of Government spending in the Resource Sector has remained relatively constant since 2003-04. The percentage of Government spending in the General Government Sector has declined since 2003-04.

Chart 26 shows the Province's per capita expenses for the years ended March 31, 2004 to 2013, together with a comparison of these per capita expenses to the average of other provinces in Canada.

Chart 26

Province of Newfoundland and Labrador
Per capita expenses compared to the average of other provinces
Years Ended March 31

Source: Public Accounts - all provinces; Statistics Canada

Province has the highest per capita expenses in Canada Per capita expenses in Newfoundland and Labrador are the highest in Canada. Furthermore, our per capita expenses are approximately 40% higher than the average of other provinces.

Certain factors would contribute to the Newfoundland and Labrador per capita expenses being higher than those of other provinces. For example, the Government has to provide services to a relatively small population that is disbursed over a large geographical area. The appropriate level of expenses will have to balance factors such as need and affordability.

Reducing per capita expense in Newfoundland and Labrador to the average of other provinces would require a reduction of expenditure levels of \$2.3 billion.

# Expenses as a percentage of GDP

Comparing expenses to GDP provides an indication of the trend of Provincial spending over time in relation to the growth in the economy. A trend that shows expenses as a percentage of GDP rising may not be sustainable.

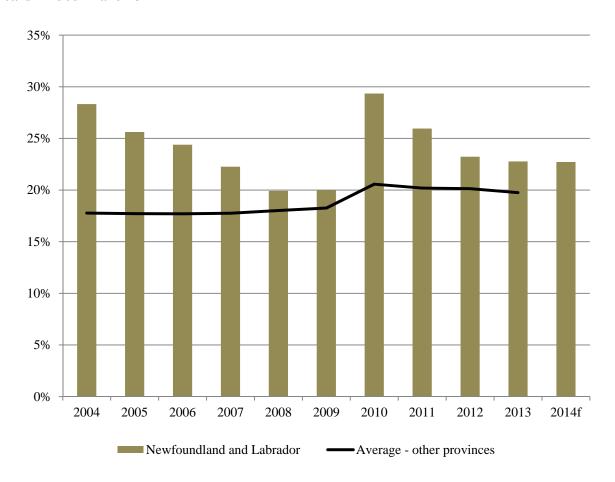

Chart 27 shows expenses as a percentage of GDP from 2004 to 2014.

Chart 27

Consolidated Summary Financial Statements

Expenses as a Percentage of GDP

Years Ended March 31

The Province's expenses as a percentage of GDP have declined since 2010, but are still higher than they were in 2008 - which was the lowest point in since 2004. In addition, expenses as a percentage of GDP in Newfoundland and Labrador are consistently higher than other provinces.

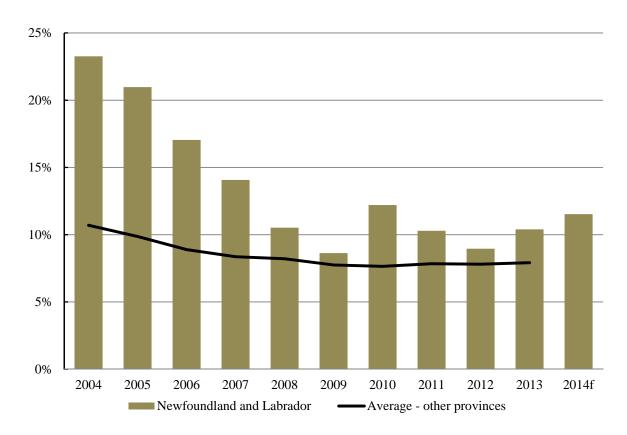

#### Interest costs as a percentage of revenue

Government incurs interest costs on its borrowings, as well as on its liabilities relating to employee future benefits. At March 31, 2013, Government's long-term borrowings, net of sinking funds, were \$5.3 billion, its unfunded pension liability was \$3.3 billion and its unfunded group health and life insurance retirement benefits liability was \$2.3 billion. In 2013, interest costs (debt expenses) related to these obligations totaled \$780 million. The significance of debt expenses is that this money is not available to fund programs and services.

Interest costs as a percentage of revenue, sometimes called the "interest bite", is an important indicator of the state of government finances.

Chart 28 provides the debt expenses as a percentage of revenue for the years 2004 to 2014.

Chart 28 **Consolidated Summary Financial Statements Debt Expenses as a Percentage of Revenue Years Ended March 31** 

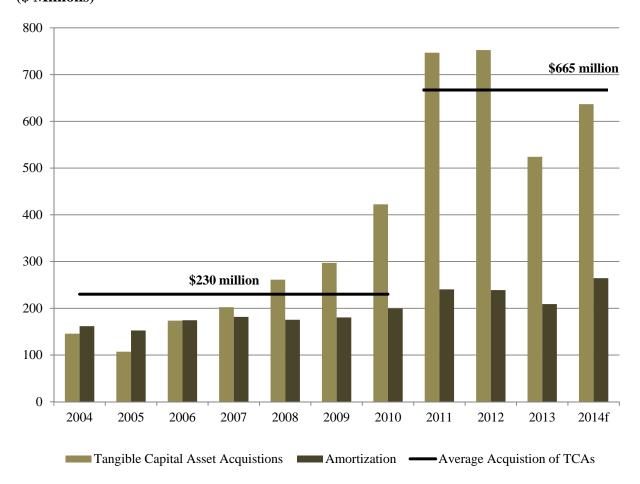

Debt expenses as a percentage of revenue has declined overall since 2004. However, since 2009 debt expenses as a percentage of revenue have increased. These costs continue to be a substantial burden for government. For example, if expenses as a percentage of revenue were reduced from the current level of 10.39% to the average of other provinces, this would result in an annual saving of approximately \$186 million.

## **Tangible Capital Assets**

Tangible capital assets generally relate to the physical infrastructure of the Province and include roads, buildings and major equipment. A tangible capital asset has a useful life that extends beyond one year. The acquisition is recorded as an asset of the Province in the year acquired and the cost is amortized (recorded as an expense) over the life of the asset.

Chart 29 outlines the acquisition of tangible capital assets (TCAs) and the related amortization for the years ended March 31, 2004 to 2014.

Chart 29
Consolidated Summary Financial Statements
Tangible Capital Asset Acquisition and Related Amortization
Years Ended March 31
(\$ Millions)

Government has increased capital spending dramatically in recent years, in large part due to an announced Infrastructure Strategy. From 2004 to 2013, the Province spent a total of \$3.6 billion related to tangible capital assets. Acquisitions of tangible capital assets from 2011 to 2013 averaged approximately \$675 million (\$665 million from 2011 to 2014f) – almost 3 times greater than the average annual spending on tangible capital assets from 2004 to 2010 - which was \$230 million.

The acquisition of tangible capital assets may be seen as a means to provide better services and reduce future expenditures. However, the acquisition of tangible capital assets increases Net Debt as the tangible capital assets have to be acquired through either the use of financial assets or the assumption of additional liabilities.

During the next two years, Government expects to incur deficits from its operations, which will increase Net Debt. The acquisition of tangible capital assets also increases Net Debt. Therefore, Government will need to carefully consider whether the level of tangible capital asset acquisitions that has occurred in recent years is sustainable in the future.

In addition, Government has established a target of having Net Debt per capita equal the average of all other provinces within 10 years. Government will also need to consider the impact that a significant level of tangible capital asset acquisitions on an annual basis combined with potential deficits will have on the achievement of this target.

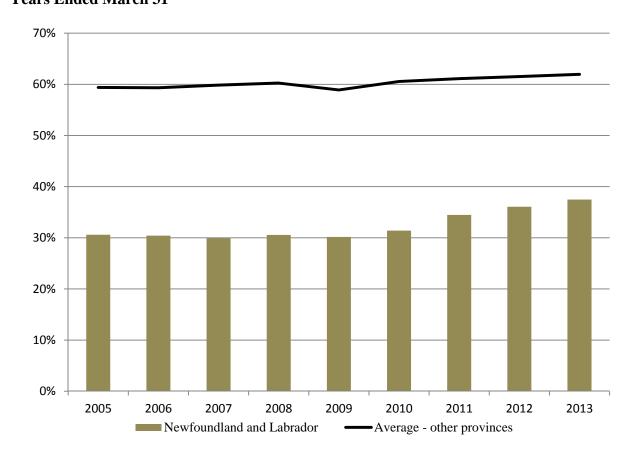

## Ratio of the Net book value of tangible capital assets to the cost of tangible capital assets

The net book value of tangible capital assets as a percentage of cost of tangible capital assets measures the extent to which the estimated useful lives of the Province's tangible capital assets are available to provide services to the public. A lower percentage indicates that the Province's tangible capital assets have less remaining useful lives available. If the tangible capital assets have less remaining useful lives available, the Province may have less flexibility when providing services in the future because of the need to spend more of its resources on the repair or replacement of tangible capital assets.

Chart 30 shows the ratio of the net book value of tangible capital assets to the cost of tangible capital assets for 2005 to 2013.

Chart 30

Consolidated Summary Financial Statements
Ratio of the Net Book Value of Tangible Capital Assets to the Cost of Tangible Capital Assets
Years Ended March 31

The net book value of tangible capital assets as a percentage of cost of tangible capital assets has averaged approximately 30% from 2005 to 2009. Since 2009, the percentage has increased from 30% to 37%, which can be attributed to the investment in tangible capital assets since that time.

Chart 30 also indicates that, relative to other jurisdictions in Canada, Newfoundland and Labrador infrastructure is considerably older, an indication of future need.

The acquisition of tangible capital assets may be seen as a means to provide better services and reduce future expenditures. However, Government needs to consider the impact that tangible capital asset acquisitions have on the Province's Net Debt and maintain acquisitions at a level which is sustainable over the long term.

# **Demographics**

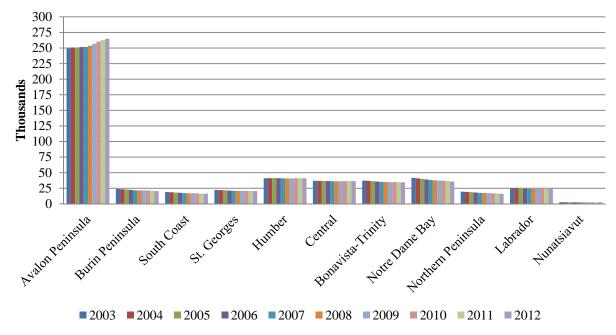

Demographic change is one of the most significant factors which will affect future demands for public services and the delivery of those services. Demographic issues have impacted the revenues and expenses of the Province in previous years and will continue to do so in the future. Demographic issues include shifts in the population between various regions within the Province and an aging population. Such issues will impact service delivery, the types of services required and the associated costs. The impact of demographic change will also have a significant impact on labour markets.

#### **Population**

From 2003 to 2012, the population of Newfoundland and Labrador has decreased from 518,520 to 512,659. Chart 31 shows the population of the Province by region for the years 2003 to 2012.

Chart 31

Province of Newfoundland and Labrador Population by Region 2003 - 2012

Source: Statistics Canada

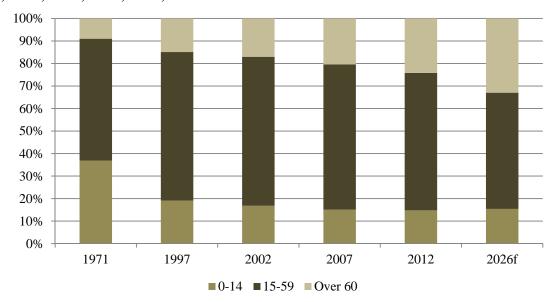

Population shifts may create challenges for the delivery of public services During this time period, the population of the Avalon Peninsula region, which includes the St. John's region, increased from 249,150 to 264,851. Meanwhile, during this time period the populations for other regions of the Province, all of which had populations under 50,000, generally declined. This is likely the result of individuals moving to the Avalon Peninsula region, from either within the Province or outside of the Province, to pursue educational or employment opportunities or leaving the Province altogether.

Population shifts between various regions of the Province can create significant challenges for Government and have to be given serious consideration when determining how to deliver public services in a cost effective and efficient manner. This is particularly important when planning for the development of infrastructure including roads and health care and education facilities. Government may find it increasingly challenging to maintain the delivery of public services, such as education, in regions where there are declining populations. This is in contrast to other regions where Government may struggle to keep up with the demands for education services that are created by increasing populations.

# Aging population

Chart 32 shows the percent of population by age cohort for 1971, 1997, 2002, 2007, 2012, and 2026.

Chart 32
Province of Newfoundland and Labrador
Percent of Population by Age Cohort
1971, 1997, 2002, 2007, 2012, 2026

Source: Statistics Canada, Newfoundland and Labrador Statistics Agency

# Population is aging

The population of Newfoundland and Labrador is getting older. In 1971, the percentage of the population that was 60 years of age or older was 9%, while in 2012, 24% of the population is 60 years of age or older. Meanwhile, the percentage of the population that is under 15 years of age has declined from 37% in 1971 to 15% in 2012. Furthermore, in 2026 it is forecasted that 33% of the population will be 60 years of age or older, while 15% of the population will be under 15 years of age.

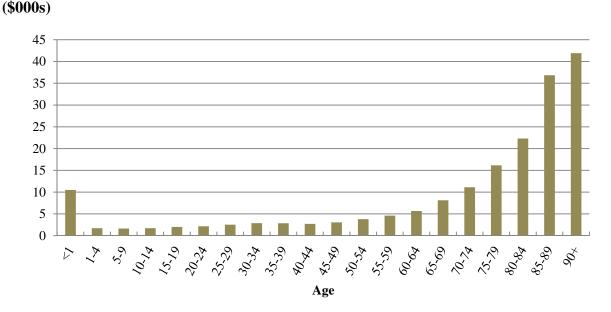

Aging population may create challenges for the delivery of public services An aging population will create significant challenges for Government and has to be given serious consideration when determining how to deliver public services in a cost effective and efficient manner and in prioritizing expenditures. As the population ages, there will be an increased demand for certain public services such as health care and seniors' housing.

Health care spending is highly correlated to the age of the population. As the population ages, there will be an increase in the prevalence of chronic diseases such as heart disease, cancer, diabetes and arthritis, which will result in higher demands on health care in the future.

Chart 33 shows the expenditures per capita on health care in the Province by age group for 2011.

Chart 33

Province of Newfoundland and Labrador
Per Capita Health Care Expenditures by Age Group
2011

Sources: National Health Expenditure Database, Canadian Institute for Health Information; Statistics Canada

In addition, aging of the population will likely be more prevalent in certain regions of the Province, as younger people move to larger centers to pursue educational or employment opportunities. This may have significant implications for long term planning of regional health care facilities and service delivery models.

However, the demand for other public services such as education, on an overall basis, will decline has the population ages. As in cases where the demand for a public service is increasing, decreases in the demand for a public service also has implications for long term planning related to the delivery of the service.

Aging population is expected to impact labour markets in the Province

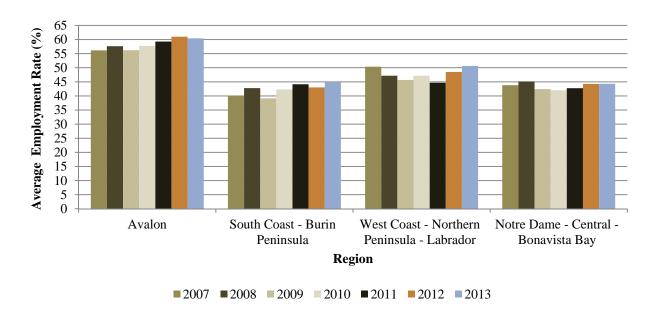

An aging population is also expected to impact labour markets in the Province. As older people leave the labour force there will be fewer younger people available to enter the labour force, potentially resulting in labour shortages. This situation would be most prevalent in regions of the Province where the population is generally older and may impact certain employment categories more than others. These potential labour shortages would be addressed by individuals staying in the labour force longer or increased inmigration and will likely result in higher labour costs.

Delivery of public services is impacted by employment rates The delivery of public services is also impacted by the number of people working in various regions of the Province. The employment rate measures the percentage of a population of working age that is employed. Regions with increased levels of economic activity, such as the Avalon region, would be expected to have a higher employment rate. This creates increased need for infrastructure, such as roads, to support the economic activity and less need for other public services such as income support or employment creation programs. However, in regions where there is lower employment, the need for public services such as income support or employment creation programs increases. Regions with lower employment rates may also experience population declines as people move elsewhere to seek employment opportunities. This shift in the population further compounds the challenges in delivering public services to these regions.

Chart 34 shows the average employment rate by region in the Province for the years 2007 to 2013.

Chart 34

Province of Newfoundland and Labrador Average Employment Rate by Region 2007 to 2013

Source: Statistics Canada, Labour Force Survey, September, 2013

The employment rate for the Avalon region has exceeded other regions of the Province since 2007.

# CHAPTER 6 ENVIRONMENTAL LIABILITIES

#### **Environmental Liabilities**

#### **Environmental Liabilities**

There are many sites in the Province which have environmental contamination resulting from such things as PCBs and old fuel storage tanks. These sites include, for example, the old Harmon air force base, the Marystown Shipyard, former mining properties and the former Abitibi-Consolidated sites.

Government will ultimately have involvement with all contaminated sites in the Province, however, the extent of the involvement and resulting financial costs may vary. Costs associated with remediation can be significant.

In the case of contaminated sites for which the Province has responsibility, current generally accepted accounting principles require that, if a reasonable estimate of environmental remediation costs can be determined, and it is likely that the Province will be liable for these costs, the amount should be recorded as a liability in the Province's financial statements.

The Province's financial statements include an environmental liability of \$28.3 million as at March 31, 2013, relating to 15 sites reported by the departments of Environment and Conservation, Transportation and Works, Education, and Natural Resources.

The Public Sector Accounting Board has issued a new accounting standard related to liabilities for contaminated sites. Under this new standard, a liability for remediation of contaminated sites should be recognized when, as at the financial reporting date, all of the following criteria have been satisfied:

- (a) an environmental standard exists;
- (b) contamination exceeds the environmental standard:
- (c) the government:
  - (i) is directly responsible; or
  - (ii) accepts responsibility;
- (d) it is expected that future economic benefits will be given up; and
- (e) a reasonable estimate of the amount can be made.

#### **Environmental Liabilities**

The new standard for liabilities related to contaminated sites becomes effective on April 1, 2014, and, as a result, the Province's financial statements will need to be in compliance with this standard for the year ended March 31, 2015.

In order to implement this standard, Government will need to evaluate contaminated sites using the criteria established by the standard and record a liability related to any contaminated sites for which all of the criteria have been satisfied. In order to perform the evaluations of the contaminated sites that are needed to implement the standard, Government will need complete and accurate information related to the contaminated sites for which it is potentially responsible. This would include information regarding estimated remediation costs.

At the present time, Government's contaminated sites database does not contain information regarding the estimated remediation costs associated with many of the contaminated sites that have been identified. Officials of the Department of Environment and Conservation have indicated that remediation costs are difficult to determine without a full assessment of the impacted sites.

Given the complexity that is often involved with performing assessments of sites that are potentially contaminated, Government may have difficulty obtaining the information that it requires for the implementation of the standard by the year ended March 31, 2015. In addition, the new standard outlines disclosure requirements related to liabilities for contaminated sites. In order to comply with the standard, Government will need to disclose additional information in its financial statements related to contaminated sites.

In order to ensure that it implements the new standard, *Liability for Contaminated Sites*, by the year ended March 31, 2015, Government should increase its efforts to identify all contaminated sites in the Province for which it is potentially responsible and complete any required environmental assessments related to all known sites where contamination may exist. In addition, Government should evaluate the contaminated sites using the criteria established in the new standard and record a liability related to sites for which the criteria have been satisfied by the effective date of the standard.

# **APPENDIX**

Ι

# ANSWERS TO FREQUENTLY ASKED QUESTIONS

ABOUT THE PUBLIC ACCOUNTS

#### What are the Public Accounts?

The Public Accounts contain the annual financial statements of the Province of Newfoundland and Labrador. They are a representation by Government, of the Province's financial condition as at the end of a fiscal year, and the results of its operations, the changes in its Net Debt and its cash flows for the year ended on that date.

The Financial Administration Act requires that the Public Accounts show:

- the state of the public debt;
- the revenue and expenditure;
- all compromises, remissions, refunds and amounts written off; and
- those other accounts and statements that may under good accounting practice be required to show the financial position of the Province at the end of the fiscal year.

# Why are they prepared?

The *Financial Administration Act* requires that the Public Accounts be prepared and tabled in the House of Assembly. The Public Accounts provide an important link in an essential chain of public accountability. In an era where, in Canada and throughout the world, there is a heightened need for transparency and accountability, the preparation and audit of Government's financial statements is of increasing importance. These statements are the principal means by which Government reports to the House of Assembly and to all Newfoundlanders and Labradorians on its stewardship of public funds.

#### What are the Public Accounts "Volumes"?

The Public Accounts for the year ended March 31, 2013, are published in two volumes:

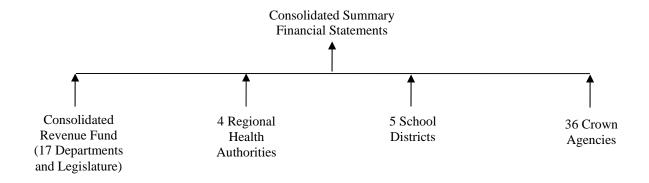

*Volume I - Consolidated Summary Financial Statements* 

This Volume presents the Consolidated Summary Financial Statements of the Province of Newfoundland and Labrador. The Consolidated Summary Financial Statements are prepared on the accrual basis of accounting in accordance with the accounting standards (*i.e.*; Canadian Public Sector Accounting Standards) established for governments by the Public Sector Accounting Board of the Canadian Institute of Chartered Accountants (PSAB), and as outlined in the significant accounting policies of the Province.

Information contained in this Volume provides the most complete information about the operating results and financial position of the Province and combines the financial activities of the Consolidated Revenue Fund (which accounts for the financial activities of the 17 Government departments and the Legislature) and the various Crown corporations, boards and authorities which are controlled by and therefore accountable to the Government of Newfoundland and Labrador. Government departments and Crown agencies are accountable for the administration of their financial affairs and resources through a Minister.

The types of entities included in these financial statements are outlined as follows:

Chart 1 **Entities included in the Consolidated Summary Financial Statements** March 31, 2013

As Chart 1 shows, the Consolidated Summary Financial Statements include the financial activities of the Consolidated Revenue Fund as well as 45 other entities (4 regional health authorities, 5 school districts and 36 Crown agencies).

#### Volume II - Consolidated Revenue Fund Financial Statements

This Volume provides information about the operating results and financial position of the Consolidated Revenue Fund only, comprised of the 17 Government departments and the Legislature. These statements are also prepared on an accrual basis of accounting.

# What Statements are included and what do they show?

Government's financial statements are intended to reflect a fundamental difference between financial reporting for a government and financial reporting for private sector businesses. Governments use public money to provide services through various programs, with no intent to make a profit. As such, a government's financial statements differ from those of business by focusing on Net Debt - not profit or loss. Simply put, Net Debt represents the amount Government will eventually have to raise to pay for incurring past liabilities, and is calculated as total liabilities less total financial assets.

The Consolidated Summary Financial Statements are comprised of five main statements:

Consolidated Statement of Financial Position

This statement shows the Province's financial assets, liabilities, Net Debt, non-financial assets and accumulated deficit.

Financial assets (such as cash, temporary investments and receivables) are different from non-financial assets (such as roads, schools and hospitals) in that they can be used to discharge existing liabilities or finance future operations. Liabilities include borrowings as well as liabilities relating to employee future benefits, including the unfunded pension liability. The difference between liabilities and financial assets is the Province's Net Debt. This is the amount which the government of the day leaves for future governments to either repay or refinance.

Non-financial assets will be used in providing programs and services and therefore are deducted from Net Debt in calculating the accumulated deficit. It is this accumulated deficit which reflects the difference between past expenses and revenues, i.e. the net accumulation of all annual surpluses and deficits.

Consolidated Statement of Change in Net Debt

This statement reflects the change in Net Debt for the year, calculated as the annual surplus or deficit, any changes in the net book value of tangible capital assets and any changes in other non-financial assets.

Consolidated Statement of Operations

This statement reflects the annual surplus or deficit, along with a comparison of budgeted and actual revenues and expenses. The surplus or deficit is calculated as the difference between revenues and expenses for the year and represents the extent to which Government was able to raise sufficient revenues to provide for the costs of programs and services, and servicing the debt.

Consolidated Statement of Change in Accumulated Deficit

This statement reflects the change in accumulated deficit primarily resulting from the surplus or deficit for the year.

Consolidated Statement of Cash Flows

This statement reflects the change in cash (and cash equivalents such as temporary investments) and the source and use of cash through operations, financing and investing activities. It also reflects acquisitions and disposals of capital assets.

In addition to the five main statements, there are also several schedules and notes which are an integral part of the statements, and which provide additional disclosure and explanation regarding significant balances, transactions and events during the year.

## What accounting policies does Government follow?

The Consolidated Summary Financial Statements are prepared on the accrual basis of accounting in accordance with the accounting standards established for governments by PSAB, and as outlined in the significant accounting policies of the Province. Revenues are recorded when earned with expenses being recorded when incurred, in accordance with the applicable significant accounting policies.

Since PSAB recommendations relating to financial reporting by governments are generally accepted within Canada, section 59 of the Financial Administration Act (FAA) requires compliance with these recommendations to properly present the financial position, results of operations and changes in the financial position of the Province at the end of the fiscal year.

The accounting policies used by Government in preparing its financial statements are included in Note 1 to the statements and deal with such things as the method of consolidation and how assets, liabilities, revenues and expenses are recognized. The Province fully complies with PSAB recommendations and standards.

When preparing its financial statements, Government makes significant estimates, as not all information is available or determinable at the time of finalizing the statements. In these cases, estimates are based on the best information available at the time the statements are prepared. Examples of where estimates are used include the accrual of employee future benefits, the amortization of foreign exchange gains or losses, and the allowance for guaranteed debt. As well, estimates have been used in recording some tangible capital assets given that only limited information is available on some older assets. These estimates are audited and are provided for under generally accepted accounting principles.

#### Who audits the Public Accounts?

The Auditor General is responsible for auditing the financial statements required by the *FAA* to be included in the Public Accounts. Section 11 of the *Auditor General Act* requires that the Auditor General express an opinion as to whether the financial statements present fairly the financial position, results of operations and changes in the financial position of the Province in accordance with Government's disclosed accounting policies and on a basis consistent with that of the preceding year, together with any reservations the Auditor General may have.

#### Why are they audited?

The House of Assembly is responsible for overseeing the activities of Government and holding Government accountable for its handling of public resources. To assist this process, Government provides information about how it used public resources entrusted to it. One of the main ways Government does this is through the annual preparation, and tabling in the House of Assembly, of the Public Accounts of the Province.

The House of Assembly uses the services of the Auditor General to assist it in carrying out its oversight responsibilities by providing assurance to the Members of the House of Assembly that the information provided in the Public Accounts is appropriate, credible, complete, and accurately reflects the results of the activities of Government.

Consequently, the Auditor General's fundamental role in auditing the Public Accounts is to bring an independent audit and reporting process to bear upon the manner in which the financial statements are prepared and presented.

An audit provides reasonable, but not absolute, assurance that the Province's financial statements are free of material misstatement. Materiality means how significant financial statement omissions or misstatements, either individually or in the aggregate, would need to be in order for such omissions or misstatements to be expected to influence or change the decisions of reasonably knowledgeable users relying on those financial statements. The tolerable level of error or misstatement is a matter of judgment.

It is not possible to provide absolute assurance in a financial statement audit because it is not practical to examine 100% of transactions (due to volume), internal control systems have inherent limitations (due to control override potential), and much audit evidence is persuasive rather than conclusive.

By applying audit procedures to test the accuracy or reasonableness of the figures appearing in the financial statements, we achieve our desired level of assurance. We use audit procedures such as tracing samples of transactions to supporting documents, testing the effectiveness of certain internal controls, confirming year-end balances with third parties and reviewing the reasonableness of estimates.

We also obtain assurance regarding the financial information of Crown agencies which are consolidated in the Province's financial statements, by reviewing the agencies' audited financial statements and, in the case of agencies which are not audited by the Auditor General, by obtaining and reviewing information from the auditors of the agencies.

# APPENDIX II GLOSSARY

# Glossary

Accumulated surplus/deficit

This equals the net accumulation of all annual surpluses and deficits experienced by the Province.

Accrual basis

A method of accounting whereby revenues are recorded when earned and expenses are recorded when incurred, regardless of when cash is received or paid.

Annual surplus/deficit

The difference between a government's annual revenues and expenses.

**CICA** 

The Canadian Institute of Chartered Accountants.

**Consolidated Revenue Fund** 

All revenues over which the Legislature has power of appropriation form one Consolidated Revenue Fund. This includes the financial operations of Government departments and the Legislature.

Consolidated Summary Financial Statements Summary financial statements which consolidate the financial statements of the Consolidated Revenue Fund with the financial statements of various Crown Corporations, Boards and Authorities which are controlled by the Government and which form part of the Province's reporting entity.

**Debt expenses** 

Also known as the cost of borrowing, or debt servicing costs, this is the interest cost incurred by a government on its borrowings and liabilities associated with retirement benefits.

**Environmental liability** 

An estimate of the cost of remediation that the Province will have to incur in the future.

Federal transfers Funds received by a province from the Federal Government, such as the Canada Health and Social Transfer and cost-shared programs.

**Financial assets** 

Assets of a government (such as cash, investments, loans and accounts receivable) that could be used to discharge existing liabilities or finance future operations.

Canadian Generally accepted auditing standards This refers to the auditing standards that auditors, including the Office of the Auditor General, follow in order to be consistent in its auditing practices with similar organizations and to comply with the standards as proclaimed by the CICA. The authority for these standards is the CICA.

# Glossary

**Gross domestic** product (GDP)

The money value of goods and services produced within a geographical boundary. It can be reported without adjusting for inflation (known as market value, current or nominal GDP) or it may be discounted for the effects of inflation (real GDP). In this report, GDP information is obtained from the Department of Finance, and is not adjusted for inflation unless otherwise indicated.

Interest bite

The extent to which a government must use revenue to pay interest costs, rather than to provide new or expanded programs and services, reduce taxation levels or repay debt.

**Interest cost** 

Interest on the Province's debt (e.g. borrowings, unfunded pension liability), as well as other debt-related expenses.

**Net borrowings** 

Total borrowings (debentures, treasury bills, etc.) less sinking funds. Also referred to as Provincial debt.

Net Debt

Government's liabilities less its financial assets. This is the residual liability amount that will have to be paid or financed by future taxpayers.

Non-financial assets

Assets consumed in the delivery of government services, but not intended to reduce existing or future liabilities. Non-financial assets are primarily comprised of tangible capital assets.

**PSAB** 

Public Sector Accounting Board of the Canadian Institute of Chartered The Board issues standards and guidance with respect to Accountants. matters of accounting and financial reporting in the public sector.

**Public** Accounts Annual financial accountability document of the Province. It includes Volume I - Consolidated Summary Financial Statements and Volume II -Consolidated Revenue Fund Financial Statements.

**Public debt** 

Borrowings of a government. Debt generally consists of debentures, notes payable, capital leases and mortgages.

**Tangible** capital assets Non-financial assets which are held for use in the production or supply of goods and services and have useful economic lives extending beyond an accounting period. Examples include buildings, roads, infrastructure, marine vessels and heavy equipment and machinery.
